BIM 3.0 Dal disegno alla simulazione Carlo Argiolas, Emanuela Quaquero, Riccardo Prenza, 2016-01-03T00:00:00+01:00 I disegni esistono per rappresentare l'edificio, le simulazioni esistono per anticiparne le prestazioni. Questo libro tratta di processi e nello specifico di Building Information Modeling, più comunemente conosciuto con l'acronimo di BIM. L'accezione completa di BIM rimanda ad una filosofia di processo in cui l'edificio viene costruito prima della sua effettiva realizzazione fisica all'interno di un ambiente virtuale attraverso la collaborazione ed i contributi di tutti gli attori coinvolti nel progetto: come architetti, progettisti, consulenti, analisti energetici, contractor, fornitori, facility manager e proprietari. Caratteristica di questa filosofia è un approccio altamente strategico al processo ed al raggiungimento degli obiettivi di progetto in cui l'oggetto architettonico e le sue prestazioni possono essere valutati nella loro interezza già in fase di progettazione. La considerazione dell'edificio si sposta quindi dal semplice prodotto architettonico ultimato al suo intero life cycle. La nascita di questa filosofia di processo è dovuta alla sostanziale incapacità dei mezzi di progetto tradizionali di supportare il settore delle costruzioni di fronte alle complesse trasformazioni che

caratterizzano il nostro tempo Obiettivo dello studio quello di inserire in prima istanza il Building Information Modeling all interno di una narrazione capace di trasmettere gli esiti operativi del concetto di simulazione rispetto al paradigma tradizionale di progetto Il libro pertanto indirizzato a studenti e professionisti attivi nel settore delle costruzioni intende rappresentare sia un punto di arrivo che una base di lavoro per ulteriori ricerche
