This exaggerated response of the immune system to certain antigens or conditions is called allergy. The symptoms of which are caused due to the release of chemicals like histamine and serotonin. OR

- (b) The secondary lymphoid organs are those which provide the site for the actual interaction of antigen and antibody and kill them off. Since, the inner lining of intestine is directly in contact with the external environment (food sources from outside) which is prone to microbial infection, so they contain lymph nodes where lymphocytes interact with and kill the foreign antigens. Hence, the epithelial lining of our intestine is considered as a secondary lymphoid organ.
