Arsenic in Geosphere and Human Diseases: Arsenic 2010 Jiin-Shuh Jean, Jochen Bundschuh, Prosun Bhattacharya, 2010-04-26 The congress Arsenic in the Environment offers an international multi and interdisciplinary discussion platform for arsenic research aimed at short term solutions of problems with considerable social impact rather than only focusing on cutting edge and breakthrough research in physical chemical toxicological medical and other specific issue

Metal Removal and Recovery from Mining Wastewater and E-waste Leachate Suthee Janyasuthiwong, 2020-02-18 Metal contamination in the environment is a persisting global issue The metal reservoirs in the earth have declined due to society's needs and due to uncontrolled mining activities Therefore the idea to recover metals from waste streams has emerged In this thesis cost competitive technologies such as adsorption using agro wastes and precipitation using an inverse fluidized bed IFB reactor were investigated with special emphasis on the recovery of base metals Groundnut shell showed good potential for metal Cu Pb and Zn removal From artificial neural network modeling the performance of the sulfate reducing bacteria SRB was found to be strongly pH dependent the removal efficiency of Cu and

Zn in the IFB at pH 5.0 was 97%. Electronic waste is a good candidate as secondary metal resource. The recovery of Cu from computer printed circuit boards (PCBs) using biogenic sulfide precipitation was investigated as well. Using this technology Cu could be recovered at 0.48 g Cu/g PCBs.

Bio-Geo Interactions in Metal-Contaminated Soils Erika Kothe, Ajit Varma, 2012-01-05. Metal contamination is an increasing ecological and ecotoxicological risk. Understanding the processes involved in metal mobilization, sorption and mineralization in soils are key features for soil bioremediation. Following an introduction to the physical chemical and biological components of contaminated soils, various chapters address the interactions of soil microorganisms, plants and the water phase necessary to transfer metals into biological systems. These include topics such as potential hazards at mining sites, rare earth elements in biotic and abiotic acidic systems, manganese redox reactions, biomineralisation, uranium in seepage water, metal resistant streptomycetes, mycorrhiza in reforestation, metal hyperaccumulation in plants, microbial metal uptake and their potential for bioremediation. This book will be of interest to soil biologists, geologists and chemists, researchers and graduate students as well as consulting companies and small enterprises involved in bioremediation.

Electrochemically Assisted Remediation of Contaminated Soils M. A. Rodrigo,E. V. Dos Santos,2021-06-15 This book provides an overview of the current development status of remediation technologies involving electrochemical processes which are used to clean up soils that are contaminated with different types of contaminants organics inorganics metalloids and radioactive Written by internationally recognized experts it comprises 21 chapters describing the characteristics and theoretical foundations of various electrochemical applications of soil remediation The book s opening section discusses the fundamental properties and characteristics of the soil which are essential to understand the processes that can most effectively remove organic and inorganic compounds This part also focuses on the primary processes that contribute to the application of electrochemically assisted remediation hydrodynamic aspects and kinetics of contaminants in the soil It also reviews the techniques that have been developed for the treatment of contaminated soils using electrochemistry and discusses different strategies used to enhance performance the type of electrode and electrolyte and the most important operating conditions In turn the book s second part deals with practical applications of technologies related to the separation of pollutants from soil Special emphasis is given to the characteristics of these technologies regarding transport of the contaminants and soil toxicity after treatment The third part is dedicated to new technologies including electrokinetic remediation and hybrid approaches for the treatment of emerging contaminants by ex situ and in situ production of strong oxidant species used for soil remediation It also discusses pre pilot scale for soil treatment and the use of solar photovoltaic panels as an energy source for powering electrochemical systems which can reduce both the investment and maintenance costs of electrochemically assisted processes

Reduction, Modification and Valorisation of Sludge Azael Fabregat,Christophe Bengoa,Josep Font,Frank Stueber,2011-03-15 The adoption of the Urban Waste Water Treatment Directive requires sewage sludge to be subsequently treated and the Sewage Sludge Directive regulates the uses and properties of stabilised sludge for being either recycled or disposed Both directives drive specific actions in two complementary ways Reduction Modification and Valorisation of Sludge aims at developing strategies for the disposal and reuse of waste sludge It aims to develop several processes for reducing both amount and toxicity of sludge with simultaneous transformation into green energy vectors such as methane or hydrogen Mesophilic and mainly thermophilic and autothermophilic conditions are explored as classical alternatives for sludge stabilisation assuring sanitary conditions of the treated sludge Valuable materials are obtained from sludge such as activated carbons which are used in conventional adsorption processes and in innovative advanced oxidation processes Guidelines are provided for technology selection in agreement with the geographic economic and technical characteristics of the sewage plants demonstration of the feasibility
