

Answer the following questions in your own words using the textbook as your source. Answer with complete sentences.

1. Use the following terms in sentences that explain the relationship between the terms:
a. genes
b. alleles

Explain each concept with regard to differences between different species. Explain how they are connected or related with genes.

2. Use the following terms in sentences that explain the relationship between the terms:
a. evolution
b. trait
c. variation

Explain each concept with regard to differences between different species and its function. Explain how they are connected or related with genes. **Evolution is the change in the characteristics of a population over time. It is caused by natural selection, genetic drift, and mutation. A trait is a characteristic of an individual. Variation is the difference in traits between individuals.**

3. What are the five themes of geography? Why are they important?

The five themes of geography are location, place, region, movement, and human-environment interaction. They are important because they help us understand the world and how it changes over time.

4. What are the different characteristics of genes and traits?

Genes are the basic units of heredity. They are passed from parents to offspring. Traits are the characteristics of an organism. They are determined by genes. Genes and traits are related because genes determine traits. **Genes are the instructions for making proteins, which are the building blocks of life. Traits are the characteristics of an organism, such as eye color or height. Genes and traits are related because genes determine traits.**

5. What is the difference between a gene and a trait? Why are they important?

A gene is a unit of heredity. It is passed from parents to offspring. A trait is a characteristic of an organism. It is determined by genes. Genes and traits are important because they determine the characteristics of an organism.

6. How do different species differ?
