
Abstract The purpose of this study was to determine the effect of a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program on the physical fitness of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were randomly assigned to either an exercise group or a control group. The exercise group performed a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program. The control group performed no exercise. The physical fitness of the exercise group was significantly higher than the control group at the end of the 12-week program. The results of this study suggest that a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program is an effective means of improving the physical fitness of sedentary, middle-aged women.
