Books in Print Supplement ,1985 **The Publishers' Trade List Annual** ,1985 **Our Cosmic Origins** A. H. Delsemme,1998 Our Cosmic Origins first published in 1998 traces the remarkable story of the emergence of life and intelligence right through the complex evolutionary history of the Universe Armand Delsemme weaves together a rich tapestry of science bringing together cosmology astronomy geology biochemistry and biology in this wide ranging book In following the complex chronological story we discover how the first elements formed in the early Universe how stars and planets were born how the first bacteria evolved towards a plethora of plants and animals and how the coupling of the eye and brain led to the development of self awareness and ultimately intelligence Professor Delsemme concludes with the tantalising suggestion that the existence of alien life and intelligence is likely and examines our chances of contacting it This provocative book provides the general reader with an accessible and wide ranging account of how life evolved on Earth and how likely it is to exist elsewhere in the Universe *Activity Coefficients in Electrolyte Solutions* Kenneth S. Pitzer,2018-05-04 This book was first published in 1991 It considers the concepts and theories relating to mostly aqueous systems of activity coefficients *Particles, Strings and Cosmology* Kiwoon Choi,Jihn E. Kim,Dongchul Son,2005-12-12 PASCOS is an interdisciplinary symposium on the interface of Particle physics String theory and Cosmology Over the past

two decades these three disciplines have increasingly become closer Historically there was always a strong overlap between particle physics and cosmology This connection has become even stronger with the realization that some of the fundamental issues in cosmology such as the presence of dark matter and dark energy may possibly find a resolution only via new theories of particle physics At the same time string theory has begun to play an increasingly important role in particle physics as a possible framework for building unified models of particle interaction including gravity In recent years we have seen an increasing overlap between cosmology and string theory and currently the area of string cosmology is one of the most active fields of research PASCOS 2005 aimed to provide coherent discussions of recent developments on the interface of the three disciplines and also on their interconnections In particular superstring aspects in low energy particle theory SUSY and cosmological applications moduli stabilization are extensively covered in this volume Topics include dark matter and dark energy baryogenesis flavor and CP violation neutrino physics supersymmetry and extra dimensions flux compactification string model building as well as brane cosmology
