

Answer the following questions in your own words using the textbook as your resource. Answer with complete sentences.

1. Use the following terms in sentences that explain the relationship between the terms:
a. genes
b. alleles

Explain each concept with regard to differences throughout all different species. Explain that they are associated with each other.

2. Use the following terms in sentences that explain the relationship between the terms:
a. evolution
b. trait
c. variation

Evolution, which, particularly, is the change in the genetic composition of a population over time, can be observed in the natural world. It is the process by which the genetic composition of a population changes over time. **Evolution is the change in the genetic composition of a population over time.**

3. What are the five themes of geography? Why are they important?

The five themes of geography are location, place, region, movement, and human-environment interaction. They are important because they provide a framework for understanding the world and the relationship between people and their environment.

4. What are the different characteristics of genes and traits?

Genes are the basic units of heredity. They are the instructions for making proteins, which are the building blocks of life. Traits are the characteristics of an organism that are determined by genes. They are the physical and chemical expressions of the genes. **Genes are the instructions for making proteins, which are the building blocks of life. Traits are the characteristics of an organism that are determined by genes. They are the physical and chemical expressions of the genes.**

5. What is the difference between a gene and a trait? Why is this important?

A gene is a unit of heredity that is passed from parent to offspring. It is the instructions for making a protein. A trait is a characteristic of an organism that is determined by a gene. It is the physical and chemical expression of the gene.

6. How do genes and traits relate to each other?
