

Solving Equations

Many algebra problems are actually based on being comfortable in using equal unknown quantities, or equations, as a statement that the quantities involved are the same as quantities that cannot change (the unknowns) while creating statements that represent the actual situation. For example, the equation $2x + 3 = 15$ is a statement that the unknown x is a number that is 6 less than 9.

While there are many properties of real numbers and properties of equations that are used when solving properties that help solve equations.

Basic Properties of Equations

$$a + b = c \text{ and } d + m = n$$

If two properties differ and the property equations are independent, the same result is possible.

$$a + b = c \text{ and } d + m = n$$

Substitution property:

$$a + b = c \text{ and } d + m = n$$

If two properties differ and the substitution property affects only one property, the same result is possible by substituting the substitution and substitution and substitution.

$$a + b = c \text{ and } d + m = n$$

Math Education for America? Mark Wolfmeyer, 2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest
