

MAINTAINING THE KOMPAC II

Your Kompac II Automatic Dampening System should be installed by a professional service person who has been trained on the Varn Kompac System. No adjustment should be required from job to job or stock to stock; however, there are certain routines that you must understand and be able to perform so that your Kompac unit remains in top printing condition.

□ MAINTENANCE:

WARNING: Do not run the Kompac unit with the safety cover removed. Unplug press before servicing.

Proper cleaning of rollers and seals is essential to prolonging the printing life of your Kompac unit. Since the dampener is the heart of the duplicator, it is recommended that you clean it daily. We also strongly recommend that you use the products included in the Kompac Chemical Starter Kit, not only for the Kompac, but for the ink rollers as well. Some "bargain" solvents containing kerosene, white gas or paint thinner will not only destroy your rollers, but these solutions are extremely flammable and dangerous to inhale.

Varn manufactures a complete range of products specifically designed for small duplicators and approved for use on the Kompac dampener. If there is any doubt as to which solvents to use, please ask your Varn Dealer.

WASH-UP PROCEDURES: Remove fountain bottle, Kompac safety cover and soak up excess fountain solution with a syringe or absorbent wipe.

WITH CLEAN-UP MATS: Replace Kompac safety cover. Remove excess ink from ink fountain and hang clean-up mat. Apply a small amount of roller wash to ink train and through holes in the Kompac safety cover. Engage both ink and water systems, washing up in the usual manner. When clean-up mat becomes ink covered, replace with a clean one and continue this process until the mat remains clean.

WITH WASH-UP BLADE: Replace Kompac safety cover. Keep plate on press if not to be reused or put an unwanted plate on press. Apply wash to ink rollers. Engage wash-up blade and wash until rollers appear clean. Apply wash to Kompac dampener through holes in safety cover and drop both Kompac and ink rollers onto old plate; wash until all rollers are clean.

As a final step, engage only the Kompac unit and apply wash through the holes in the safety cover and run in until both the plate form roller and the metering roller are clean.

DEGLAZING THE INKING SYSTEM AND KOMPAC UNIT: Wash the ink train as prescribed above with Varn's Revitol. Pull back the wash-up blade or remove mat which is being used. Apply and run in detergent for five minutes. Then wash-up again until roller train is thoroughly clean. Use of water miscible wash such as Varn's

VWM or V-120, will insure proper rinsing of detergent type deep cleaners. This process performed weekly will completely deglaze your rollers, improve inking distribution and maintain trouble free performance.

INSTALLING NEW SEALS: A basic white seal (part No. 92370) is shipped with the unit. This seal features rapid burn-in at the expense of wear life. It is offered in left/right configuration with a moulded dimple on inboard side.

Seals are installed as follows:

A. Manually release the seal retaining spring which hold the seal in place. Using a dull pointed object such as a ballpoint pen, raise the old seal out of the backing plate. A dimple is moulded in the side of this seal to facilitate removal.

B. Insert new seal between the backing plate and the form roller. Make sure the moulded seal dimple faces inboard toward the roller nip. Manually replace the seal hold-down spring and clip it into place. This spring provides the downward force required to hold the seal in place.

SEAL MAINTENANCE: The key to superior Kompac II performance is cleanliness, especially in regard to the sealing system. The seals should be removed and cleaned at least once a week with roller wash to remove dried or emulsified inks, paper and residues. They should be cleaned more frequently if running coarsely pigmented or metallic inks. Using electrostatic fountain

solutions, paper and clean-up mats prone to linting or picking, and overspray of thermal and litho powders or granulated deglazers can induce rapid seal ring as well as seal wear.

SEALING ASSEMBLY MAINTENANCE: It is also recommended the seal rings on each end of the metering roller be thoroughly cleaned with a non-abrasive cleaner. Finally the guide pins which connect the backing plate to the end frame should be lubricated weekly with a light lubricating oil. To check seal backing plate for proper operation, simply push backing plates towards the end frame. The backing plate should spring back to its original position. If they are stiff DO NOT pry loose. Clean and use a penetrating oil or WD-40 spray oil to free plates. After allowing to penetrate, attempt working backing plates free by hand. If this fails, call your dealer for assistance. Maintaining the overall assembly will insure squareness and proper spring pressures for sealing purposes and guarantee trouble free unit life.
