**Inborn errors of Carbohydrate Metabolism** Ivan Martinez Duncker, Ida Vanessa Doederlein Schwartz, Jose Elias Garcia-Ortiz, Melania Abreu-González, 2024-07-03 Inborn errors of carbohydrate metabolism are a heterogeneous subgroup of inborn errors that are caused by mutations in human genes coding for proteins involved in carbohydrate catabolic and anabolic pathways Through the breakdown of sugars carbohydrate catabolism allows a constant supply of energy e.g. glycolysis but also involves the breakdown of the cell's complex oligosaccharides e.g. lysosomal degradation of surface glycoconjugates allowing the recycling of monosaccharides On the other hand anabolism of carbohydrates e.g. gluconeogenesis is required to supply newly synthesized sugars to catabolic pathways also allowing interconversion of sugars and sustaining the synthetic pathways of complex carbohydrate structures such as glycosaminoglycans and glycans that are the carbohydrate moiety of glycoconjugates involved in multiple biological functions

Souza, 2024-02-05 Conversion of Water and CO<sub>2</sub> to Fuels using Solar Energy Comprehensive Resource for Understanding the Emerging Solar Technologies for Hydrogen Generation via Water Splitting and Carbon based Fuel Production via CO<sub>2</sub> Recycling Fossil fuel burning is the primary source of carbon in the atmosphere The realization that such burning can harm the life on our planet has led to a surge in research activities that focus on the development of alternative strategies for energy conversion Fuel generation using solar energy is one of the most promising approaches that has received widespread attention The fuels produced using sunlight are commonly referred to as solar fuels This book provides researchers interested in solar fuel generation a comprehensive understanding of the emerging solar technologies for hydrogen generation via water splitting and carbon based fuel production via CO<sub>2</sub> recycling The book presents the fundamental science technologies techno economic analysis and most importantly the materials that are being explored to establish artificial methods of fuel production using solar energy For the rapid advancement of the field it is necessary for researchers particularly for those who are new to the field

to have clear knowledge of various materials studied so far and their performance For this reason almost half of the book is dedicated to the discussions on materials and properties Key topics discussed in the book include Photocatalytic photoelectrochemical processes that use semiconductor photocatalysts including both ceramic and non ceramic materials Photovoltaic assisted electrochemical processes Solar thermochemical processes Molecular photosynthesis Researchers and professionals in the fields of energy and materials and closely related science and engineering disciplines could use this book to acquire clear insights on both mainstream solar fuel technologies and those in the developmental stages

**Nutrient Cycling in Forest Ecosystems** Robert G. Qualls, 2020-12-03 The long term productivity of forest ecosystems depends on the cycling of nutrients The effect of carbon dioxide fertilization on forest productivity may ultimately be limited by the rate of nutrient cycling Contemporary and future disturbances such as climatic warming N deposition deforestation short rotation silviculture fire both wild and controlled and the invasion of exotic species all place strains on the integrity of ecosystem nutrient cycling Global differences in climate soils and species make it difficult to extrapolate even a single important study worldwide Despite advances in the understanding of nutrient cycling and carbon production in forests many questions remain The chapters in this volume reflect many contemporary research priorities The thirteen studies in this volume are arranged in the following subject groups N and P resorption from foliage worldwide along chronosequences and along elevation gradients Litter production and decomposition N and P stoichiometry as affected by N deposition geographic gradients species changes and ecosystem restoration Effects of N and P addition on understory biomass litter and soil Effects of burning on soil nutrients Effects of N addition on soil fauna
