Bones, Stones and Molecules David W. Cameron, Colin P. Groves, 2004-07-08 **Bones Stones and Molecules** provides some of the best evidence for resolving the debate between the two hypotheses of human origins The debate between the Out of Africa model and the Multiregional hypothesis is examined through the functional and developmental processes associated with the evolution of the human skull and face and focuses on the significance of the Australian record The book analyzes important new discoveries that have occurred recently and examines evidence that is not available elsewhere Cameron and Groves argue that the existing evidence supports a recent origin for modern humans from Africa They also specifically relate these two theories to interpretations of the origins of the first Australians The book provides an up to date interpretation of the fossil archaeological and the molecular evidence specifically as it relates to Asia and Australia in particular Readily accessible to the layperson and professional Provides concise coverage of current scientific evidence Presents a robust computer generated model of human speciation over the last 7 million years Well illustrated with figures and photographs of important fossil specimens Presents a synthesis of great ape and human evolution Environmental Learning for Classroom and Assembly at KS1 & KS2 Mal Leicester, Denise Taylor, 2009-03-06 In **Environmental Learning for Classroom and Assembly at KS1 KS2** the highly successful and popular author Mal Leicester teams up with the conservationist Denise Taylor to teach children about wildlife and environmental conservation through the art of storytelling Reflecting the child s world the book works outwards from home to garden to neighbourhood to the countryside and seaside and to the planet as a whole At each level appreciating conserving and enhancing our environment is considered The authors follow the tried and tested format of **Stories for Classroom and Assembly** and **Stories for Circle Time and Assemblies** Each of the ten chapters includes an original themed story and is packed with lesson plans and cross curriculum learning activities designed to save teachers valuable time Leicester and Taylor combine the wonder of storytelling with topical environmental issues covering plants creatures and the planet The book covers the full range of conservation protection and enhancement themes concepts and values whilst developing the following skills literacy including oracy numeracy knowledge of the natural world imaginative development creative expression Making a highly topical and on going subject accessible to children this beautifully illustrated resource offers teachers assembly ideas lesson plans and art activities all in one book **Lithic Materials and Paleolithic Societies** Brian Adams, Brooke Blades, 2009-05-06 **Lithic Materials and Paleolithic Societies** provides a detailed examination of the Paleolithic procurement and utilization of the most durable material in the worldwide archaeological record The volume addresses sites ranging in age from some of the earliest hominin occupations in eastern and southern Africa to late Pleistocene and post Pleistocene occupations in North American and Australia The Early Paleolithic in India and the Near East the Middle Paleolithic in Europe and the Late Paleolithic in Europe and eastern Asia are also considered The authors include established researchers who provide important synthetic statements updated with

new information Recent data are reported often by younger scholars who are becoming respected members of the international research community The authors represent research traditions from nine countries and therefore provide insight into the scholarly present as well as the Paleolithic past Attempts are frequently made to relate lithic procurement and utilization to the organization of societies and even broader concerns of hominin behaviour The volume re evaluates existing interpretations in some instances by updating previous work of the authors and offers provocative new interpretations that at times call into question some basic assumptions of the Paleolithic This book will be invaluable reading for advanced students and researchers in the fields of palaeolithic archaeology geoarchaeology and anthropology
