

About this manual

This manual is designed as an instructional guide for builders, designers, apprentices, cadets and owner builders. It covers the four conventional house building systems used in Australia — Brick veneer, Timber frame, Cavity brick and Concrete block.

While the 'NCC' and 'Australian Standards' provide the legal building requirements, this manual is intended to explain the why and how to put them into practice. The graphical interpretation and step-by-step descriptions is intended for easy comprehension by the apprentice or cadet.

This manual is intended as a general guide to common on-site building methods. Specific dimensions, specifications and design of structural members must be obtained from individually prepared plans and specifications.

Methods adopted in this manual

Methods and details have been chosen through continued consultation with engineers and advisors in national industry, as well as the Timber, Concrete, Concrete block and Clay Brick Associations. While many variations on a particular detail or method may exist, those represented have been selected for their structural soundness, workmanship qualities and because they are generally approved of by engineers in industry and in accordance with the 'National Construction Code'.

NCC & Australian Standards Codes

This manual highlights only common on-site building situations and is not a building code. While every effort has been made to conform to the requirements of the 'NCC' and 'Australian Standards' these codes are under constant review and change. Should doubt arise regarding a particular situation, reference should be made to the most recent edition or amendment of these codes.

Proof readers

Proof readers are selected from engineers and professionals who are held in high regard by the relevant associations and who possess a sound working knowledge of relevant building legislation.

Manufacturer's specifications

This refers either to specifications on using construction material, joined or on-line, produced by manufacturers. It is important to read these instructions as variations are often dependent upon installation being carried out in accordance with them.

Soil testing, footing & slab design

Future structural problems may result if footings are not designed to suit each particular building site. Variations in soils with one major even between adjoining sites. It is advisable to have designs and subsoil tests for footings and slab floors performed by a competent engineer.

Site inspections

Where site and construction inspections are not a requirement, future structural failure may become the builder's legal responsibility. For this reason, it is good practice to have an engineer or building surveyor carry out inspections of footings, slab and frame or masonry work on cavity brick or concrete block houses, followed by a written certification that the work was constructed according to the approval plans and specifications. These certificates may also enhance the future resale of the house.

Roof framing

This manual includes erection and construction of multifunctional roof trusses and steel flat roofs. For 'how to pitch the conventional cut on-site roof' and for roof tables and levels refer to 'The Roof Building Manual'.

Advice for owner builders

Many houses are built by owner builders, a large number of whom are carpenters, bricklayers and other building tradespeople. However, some owner builders are inexperienced in carpentry. For these people it will be beneficial to engage a carpenter to work alongside or have a building labourer regularly visit the site. The added cost will be more than compensated for through savings in time and materials.

Explanation of design wind speed

The design of timber framing, brick/leach and other structural members is closely related to the design wind speed allocated to the individual site.

The average wind velocity for each locality has been established over a 50 year period and then given the following classifications: 'N' represents Non-cyclonic and 'C' represents Cyclonic. The categories are: 'N1' with a design gust wind speed of 44 metres per second, 'N2' = 48metres, 'N3' and 'C1' indicated as N3C1 = 48metres, N3C2 = 48metres, N3C3 = 48metres and N3C4 = 48metres.

To determine the design wind speed for an individual site engineer or either the local government building dept, a local designer, architect or engineer.

Typical Construction Methods

1

This chapter will deal with typical details and methods commonly adopted for each of the four traditional

building systems outlined below. The drawings below are enlarged on the following pages.

TIMBER FRAME (Page 4)

The timber framed house can be applied to one or more stories. The external surface can be clad with timber or manufactured weatherboards and panelling, or acrylic render can be applied. Structural load bearing is performed by the timber frame.

BRICK VENEER (Page 11)

The brick walls are a facade anchored with brick ties to a timber or steel frame. The frame performs the structural load bearing with supporting the roof, ceiling and wall bracing. A cavity space is provided between the frame and brick wall. This cavity acts as a moisture barrier.

CAVITY BRICK (cavity brick) (Page 26)

Cavity brick construction is two brick walls standing side by side separated by a cavity. Each together with brick ties that cross the cavity and embedded into the mortar joints. Flues can be either concrete slab or timber.

HOLLOW CONCRETE BLOCK MASONRY (180 single leaf) (Page 36)

Reinforcing and grout is usually applied to specific vertical walls, lintels and a top perimeter bond beam. Walls can be painted or acrylic rendered on one or both sides or simply covered in render coats. Alternatively, plasterboard bracing can be applied to the internal surface.

Stone House Building Manual Introduction

In today's digital age, the availability of Stone House Building Manual books and manuals for download has revolutionized the way we access information. Gone are the days of physically flipping through pages and carrying heavy textbooks or manuals. With just a few clicks, we can now access a wealth of knowledge from the comfort of our own homes or on the go. This article will explore the advantages of Stone House Building Manual books and manuals for download, along with some popular platforms that offer these resources. One of the significant advantages of Stone House Building Manual books and manuals for download is the cost-saving aspect. Traditional books and manuals can be costly, especially if you need to purchase several of them for educational or professional purposes. By accessing Stone House Building Manual versions, you eliminate the need to spend money on physical copies. This not only saves you money but also reduces the environmental impact associated with book production and transportation. Furthermore, Stone House Building Manual books and manuals for download are incredibly convenient. With just a computer or smartphone and an internet connection, you can access a vast library of resources on any subject imaginable. Whether you're a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that the content appears exactly as intended by the author, with no loss of formatting or missing graphics. Additionally, PDF files can be easily annotated, bookmarked, and searched for specific terms, making them highly practical for studying or referencing. When it comes to accessing Stone House Building Manual books and manuals, several platforms offer an extensive collection of resources. One such platform is Project Gutenberg, a nonprofit organization that provides over 60,000 free eBooks. These books are primarily in the public domain, meaning they can be freely distributed and downloaded. Project Gutenberg offers a wide range of classic literature, making it an excellent resource for literature enthusiasts. Another popular platform for Stone House Building Manual books and manuals is Open Library. Open Library is an initiative of the Internet Archive, a non-profit organization dedicated to digitizing cultural artifacts and making them accessible to the public. Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, Stone House Building Manual books and manuals for download have

transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals. Whether for educational, professional, or personal purposes, these digital resources serve as valuable tools for continuous learning and self-improvement. So why not take advantage of the vast world of Stone House Building Manual books and manuals for download and embark on your journey of knowledge?
