Stonehenge Cracking The Megalithic Code Book Two The Answer:

Stonehenge, Cracking the Megalithic Code David Kenworthy, 2014 Stonehenge is an enigma Its secrets continue to elude modern archaeologists However only forty years ago the designs were almost uncovered Scientists with impeccable credentials wrote best selling books and made TV documentaries revealing astonishing theories It was an astronomical observatory It was built by prehistoric Einsteins who understood Pythagorean triangles incorporating these into the design using a constant unit of measurement They were highly organised surveyors engineers scientists and theologians Scientists at the time produced compelling evidence to support these findings Now they are virtually unknown This book investigates further with very surprising results The elusive code is now almost cracked **The Stonehenge Codes** David P.

Gregg, 2014 What was the motivation behind the development of Stonehenge over 1500 years Was it a ceremonial site dedicated to the ancestors a currently fashionable view Was it a communal necropolis An exercise in sophisticated geometry A calendar for tracking the seasons and longer celestial cycles A calculator for predicting eclipses Perhaps at various times it was all these things Now Professor Gregg has gone back to reassess the design of the site and discovered many startling and unexpected patterns The same triangle and polygon geometry was used to scale monument features over the full 1500 year history Feature dimensions and proportions reflect key cycles of the Sun and Moon as do stone counts As a control the professor analyses the gear trains of the 2nd century BC Antikythera astronomical computer and finds the same often prime numbers in play Where the Antikythera device used rotating gears for its calculations Stonehenge used fixed stones and rotating priests Remarkably the same numbers turn up in Greek and Egyptian numerical myths and European folk memories speak of dancing stones or priests and taboos on ordinary mortals counting or moving stones at megalithic sites It also turns out that the geometry used and the astronomical cycles modelled have close connections to π and ϕ the Golden Section in remarkable ways Could it be that the designers of Stonehenge recognised these strange coincidences between earthly geometry the great irrational numbers like ϕ and key celestial cycles As above so below Did these strange coincidences inspire the builders to record them in stone and perhaps to worship ceremonial and ritual there Did they feel the gods were speaking to them The professor also examines the case for the infamous megalithic yard and finds much convincing new evidence for its existence including its close and simple scaling relationships of several established ancient metrics These close relationships hinder the identification of which units were used at sites like Stonehenge Underlying all these metrics the professor sees a possible origin in geodetic scaling Remarkably at Stonehenge and many other ancient sites feature dimensions often are in simple fractions of seconds of arc This occurs at levels hard to attribute to chance He concludes reluctantly that at some early date before the unification of Egypt one or more cultures accurately measured the size of the Earth This geodetic measure was then used to calibrate primitive metrics based on human proportions probably through early trade links The professor concludes from all this material that our models of intellectual and scientific development are

wrong and that we have greatly underestimated what can be done with simple technology as the astronomical knowledge of the Greeks Babylonians and the Maya show us Just how much have we forgotten **If Stones Could Speak** Marc Aronson,2010-03-09 What are the secrets of the ancient stone circle Were the carefully placed stones a burial site an ancient calendar a place of Druid worship or even a site of sacrifice World renowned archaeologist Mike Parker Pearson has spent the last seven years on a quest to answer these and many other questions In *If Stones Could Speak* award winning author Marc Aronson joins the research crew and records their efforts to crack Stonehenge s secrets National Geographic helped sponsor the Riverside archeological team s mission and now young readers can journey behind the scenes to experience this groundbreaking story first hand through the eyes of the experts Mike and his team have revolutionized our understanding of Stonehenge by exploring the surrounding landscape for clues about the stones an idea first suggested by a visitor from Madagascar The results have been breathtaking The team recently unearthed the largest Neolithic village ever found in England Marc Aronson had total access to the site the team and their work over two seasons of digging and brings the inspirational story of the discoveries taking place at this World Historical Site to young readers The informative and drama driven text includes tales of dead bodies cremations feasting and ancient rituals as well as insights into the science of uncovering the ancient past The expert text stunning photography and explanatory maps and illustrations will all help young readers see this ancient monument in totally new ways and inspire future generations of archaeological explorers
