Studies in the Atmospheric Sciences Mark L. Berliner, Douglas Nychka, Timothy Hoar, 2012-12-06 The National Center for Atmospheric Research NCAR in Boulder Colorado is a major institution performing research in the environmental sciences After an open competition the National Science Foundation gave its financial support to NCAR for the establishment of a much needed statistics probability program in the geophysical sciences The result is the NCAR Geophysical Statistics Project GSP The primary mission of this program is To foster excellence in the use of modern

statistical science in the geo physical and environmental sciences To attract and support statistical scientists for collaborative research To fulfill its mission GSP engages in research in statistical science and its application to the atmospheric and allied sciences It supports a variety of collaborative efforts between statistical scientists and disciplinary scientists Senior statisticians both members of and visitors to GSP work in conjunction with researchers at NCAR and elsewhere in the application of current statistical methods as well as in the development of new statistical models and techniques Senior GSP members and NCAR researchers also collaborate in the mentoring of junior members typically post doctoral level or statistics graduate students

Flood Risk Science and Management Gareth Pender, Hazel Faulkner, 2010-12-01 Approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years Worldwide there has been a move from a strategy of flood defence to one of flood risk management Flood risk management includes flood prevention using hard defences where appropriate but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur This change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically environmentally and in terms of social equity Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change while socio economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management providing a multi disciplinary reference text covering a wide range of flood management topics Its targeted readership is the international research community from research students through to senior staff and flood management professionals such as engineers planners government officials and those with flood management responsibility in the public sector By using the concept of case study chapters international coverage is given to the topic ensuring a world wide relevance

Human Impacts on Weather and Climate William R. Cotton, Roger A. Pielke, Sr, 2007-02-01 This 2007 edition of Human Impacts on Weather and Climate examines the scientific and political debates surrounding anthropogenic impacts on the Earth's climate and presents the most recent theories data and modeling studies The book discusses the concepts behind deliberate human attempts to modify the weather through cloud seeding as well as inadvertent modification of weather and climate on the regional scale The natural variability of weather and climate greatly complicates our ability to determine a clear cause and effect relationship to human activity The authors describe the

basic theories and critique them in simple and accessible terms This fully revised edition will be a valuable resource for undergraduate and graduate courses in atmospheric and environmental science and will also appeal to policy makers and general readers interested in how humans are affecting the global climate

Rethinking the Ozone Problem in Urban and Regional Air Pollution National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Tropospheric Ozone, 1992-02-01 Despite more than 20 years of regulatory efforts concern is widespread that ozone pollution in the lower atmosphere or troposphere threatens the health of humans animals and vegetation This book discusses how scientific information can be used to develop more effective regulations to control ozone Rethinking the Ozone Problem in Urban and Regional Air Pollution discusses The latest data and analysis on how tropospheric ozone is formed How well our measurement techniques are functioning Deficiencies in efforts to date to control the problem Approaches to reducing ozone precursor emissions that hold the most promise What additional research is needed With a wealth of technical information the book discusses atmospheric chemistry the role of oxides of nitrogen NO_x and volatile organic compounds VOCs in ozone formation monitoring and modeling the formation and transport processes and the potential contribution of alternative fuels to solving the tropospheric ozone problem The committee discusses criteria for designing more effective ozone control efforts Because of its direct bearing on decisions to be made under the Clean Air Act this book should be of great interest to environmental advocates industry and the regulatory community as well as scientists faculty and students

Cloud Dynamics Robert A. Houze Jr., 2013-10-22 Clouds play a critical role in the Earth's climate general atmospheric circulation and global water balance Clouds are essential elements in mesoscale meteorology atmospheric chemistry air pollution atmospheric radiation and weather forecasting and thus must be understood by any student or researcher in the atmospheric sciences Cloud Dynamics provides a skillful and comprehensive examination of the nature of clouds what they look like and why how scientists observe them and the basic dynamics and physics that underlie them The book describes the mechanics governing each type of cloud that occurs in Earth's atmosphere and the organization of various types of clouds in larger weather systems such as fronts thunderstorms and hurricanes This book is aimed specifically at graduate students advanced undergraduates practicing researchers either already in atmospheric science or moving in from a related scientific field and operational meteorologists Some prior knowledge of atmospheric dynamics and physics is helpful but a thorough overview of the necessary prerequisites is supplied
