Metal Removal and Recovery from Mining Wastewater and E-waste Leachate Suthee Janyasuthiwong, 2020-02-18 Metal contamination in the environment is a persisting global issue The metal reservoirs in the earth have declined due to society's needs and due to uncontrolled mining activities Therefore the idea to recover metals from waste streams has emerged In this thesis cost competitive technologies such as adsorption using agro wastes and precipitation using an inverse fluidized bed IFB reactor were investigated with special emphasis on the recovery of base metals Groundnut shell showed good potential for metal Cu Pb and Zn removal From artificial neural network modeling the performance of the sulfate reducing bacteria SRB was found to be strongly pH dependent the removal

efficiency of Cu and Zn in the IFB at pH 5.0 was 97%. Electronic waste is a good candidate as secondary metal resource. The recovery of Cu from computer printed circuit boards (PCBs) using biogenic sulfide precipitation was investigated as well. Using this technology, Cu could be recovered at 0.48 g Cu/g PCBs.

Bio-Geo Interactions in Metal-Contaminated Soils Erika Kothe, Ajit Varma, 2012-01-05

Metal contamination is an increasing ecological and ecotoxicological risk. Understanding the processes involved in metal mobilization, sorption and mineralization in soils are key features for soil bioremediation. Following an introduction to the physical, chemical and biological components of contaminated soils, various chapters address the interactions of soil microorganisms, plants and the water phase necessary to transfer metals into biological systems. These include topics such as potential hazards at mining sites, rare earth elements in biotic and abiotic acidic systems, manganese redox reactions, biomineralisation, uranium in seepage water, metal resistant streptomycetes, mycorrhiza in reforestation, metal hyperaccumulation in plants, microbial metal uptake and their potential for bioremediation. This book will be of interest to soil biologists, geologists and chemists, researchers and graduate students as well as consulting companies and small enterprises involved in bioremediation.
