It is based on technical targets for commercial viability established for energy storage development projects aimed at meeting system-level DOE goals for Electric Vehicles (EV). The specific procedures defined in this manual support the performance and life characterization of advanced battery devices under development for EVs. However, it does share some methods described in the previously published battery test manual for plug-in hybrid electric vehicles. Due to the complexity of some of the procedures and supporting analysis, future revisions including some modifications and clarifications of these procedures are expected. As in previous battery and capacitor test manuals, this version of the manual defines testing methods for full-size battery systems along with provisions for scaling these tests for modules, cells, or other subscale-level devices. The DOE United States

Advanced Battery Consortium USABC Technical Advisory Committee TAC supported the development of the manual. Technical Team points of contact responsible for its development and revision are Chul Bae of Ford Motor Company and Jon P Christophersen of the Idaho National Laboratory. The development of this manual was funded by the United States Department of Energy Office of Energy Efficiency and Renewable Energy Vehicle Technologies Office. Technical direction from DOE was provided by David Howell, Energy Storage R D Manager and Hybrid Electric Systems Team Leader. Comments and questions regarding the manual should be directed to Jon P Christophersen at the Idaho National Laboratory, jon.christophersen@inl.gov.
