Numerical Solution of Boundary Value Problems for Ordinary Differential Equations Uri M. Ascher, Robert M. M. Mattheij, Robert D. Russell, 1994-12-01 This book is the most comprehensive up to date account of the popular numerical methods for solving boundary value problems in ordinary differential equations It aims at a thorough understanding of the field by giving an in depth analysis of the numerical methods by using decoupling principles Numerous exercises and real world examples are used throughout to demonstrate the methods and the theory Although first published in 1988 this republication remains the most comprehensive theoretical coverage of the subject matter not available elsewhere in one volume Many problems arising in a wide variety of application areas give rise to mathematical models which form boundary value problems for ordinary differential equations These problems rarely have a closed form solution and computer simulation is typically used to obtain their approximate solution This book discusses methods to carry out such computer simulations in a robust efficient and reliable manner

Boundary Value Problems of Mathematical Physics O. A. Ladyzhenskaya, 1989 Constructive Methods for Linear and Nonlinear

Boundary Value Problems for Analytic Functions v Mityushev, S V Rogosin, 1999-11-29 Constructive methods developed in the framework of analytic functions effectively extend the use of mathematical constructions both within different branches of mathematics and to other disciplines This monograph presents some constructive methods based primarily on original techniques for boundary value problems both linear and nonlinear From among the many applications to which these methods can apply the authors focus on interesting problems associated with composite materials with a finite number of inclusions How far can one go in the solutions of problems in nonlinear mechanics and physics using the ideas of analytic functions What is the difference between linear and nonlinear cases from the qualitative point of view What kinds of additional techniques should one use in investigating nonlinear problems Constructive Methods for Linear and Nonlinear Boundary Value Problems serves to answer these questions and presents many results to Westerners for the first time Among the most interesting of these is the complete solution of the Riemann Hilbert problem for multiply connected domains The results offered in Constructive Methods for Linear and Nonlinear Boundary Value Problems are prepared for direct application A historical survey along with background material and an in depth presentation of practical methods make this a self contained volume useful to experts in analytic function theory to non specialists and even to non mathematicians who can apply the methods to their research in mechanics and physics
