BBC annual report and accounts 2006-07 Great Britain: Parliament: House of Commons: Culture, Media and Sport Committee, 2008-01-22 A Culture Media and Sport Committee s oral evidence session on the BBC annual report and accounts 2006 07 was followed up with some written questions The Committee has concerns about the structure and content of the BBC reply to those questions In particular it is not clear why the BBC Trust takes different views on transparency of employee costs and on transparency of talent presenters or actors etc costs and why grouping of payments in bands for one but not the other presents data protection or breach of confidence issues The Committee also questions why viewing figures for BBC3 are given in three minute reach figures rather than the standard 15 minute reach used throughout the annual report and why the BBC3 figures excluding repeats of BB1 programmes were not provided On Freesat a joint venture to provide a national satellite based free to view digital service the failure to disclose the contribution of the licence fee payer is held to be unreasonable The Committee would like greater clarity about who speaks for the BBC the Trust or Executive Future responses should make clear where accountability lies for particular issues and the BBC should take a more constructive approach to responding to Parliamentary scrutiny **U.S. Geological Survey Bulletin** ,1983

Stress Field of the Earth's Crust Arno Zang, Ove Stephansson, 2009-12-06 Stress Field of the Earth's Crust is based on lecture notes prepared for a course offered to graduate students in the Earth sciences and engineering at University of Potsdam In my opinion it will undoubtedly also become a standard reference book on the desk of most scientists working with rocks such as geophysicists

structural geologists rock mechanics experts as well as geotechnical and petroleum engineers That is because this book is concerned with what is probably the most peculiar characteristic of rock its initial stress condition Rock is always under a natural state of stress primarily a result of the gravitational and tectonic forces to which it is subjected Crustal stresses can vary regionally and locally and can reach in places considerable magnitudes leading to natural or man made mechanical failure Pre existing stress distinguishes rock from most other materials and is at the core of the discipline of Rock Mechanics which has been developed over the last century Knowledge of rock stress is fundamental to understanding faulting mechanisms and earthquake triggering to designing stable underground caverns and productive oil fields and to improving mining methods and geothermal energy extraction among others Several books have been written on the subject but none has attempted to be as all encompassing as the one by Zang and Stephansson
