Alhacen's Theory of Visual Perception Alhazen,A. Mark Smith,2001 Sometime between 1028 and 1038 Ibn al Haytham completed his monumental optical synthesis Kitab al Manazir Book of Optics By no later than 1200 and perhaps somewhat earlier this treatise appeared in Latin under the title De aspectibus In that form it was attributed to a certain Alhacen These differences in title and authorial designation are indicative of the profound differences between the two versions Arabic and Latin of the treatise In many ways in fact they can be regarded not simply as different versions of the same work but as different works in their own right Accordingly the Arab author Ibn al Haytham and his Latin incarnation Alhacen represent two distinct sometimes even conflicting interpretive voices And the same holds for their respective texts To complicate matters Alhacen does not represent a single interpretive voice There were at least two translators at work on the Latin text one of them adhering faithfully to the Arabic original the other content with distilling even paraphrasing the Arabic original Consequently the Latin text presents not one but at least two faces to the reader This two volume critical edition represents fourteen years of work on Dr Smith s part Awarded the 2001 J F Lewis Award

Vision beyond Visual Perception Borko Kovačević,Ian Richards,Junichi Toyota,2017-05-11 Vision is crucial for the survival of all animals However as this book shows its importance does not simply lie in visual perception but is rather deeply rooted in human physiology psychology and culture For instance conceptual metaphors often involve vision such as Seeing is Touching and Eyes are Limbs among others

However this Anglo centric linguistic view belies the fact that vision is not a universally preferred source for metaphor and less studied languages spoken in the four corners of the world can present cases that are unfamiliar to those who are only acquainted with Indo European languages and cultures In fact other types of perception such as hearing are often preferred as a source of comprehension in a number of languages This volume studies various issues concerning vision both synchronically and diachronically Its discussion involves specialists from different disciplines ranging from cognitive science to literary scholarship It also covers a wide range of geographical regions such as Africa and Asia As such this volume will serve to shed light on the integration of disciplines concerning vision

Jeffrey Shaw Peter Weibel abzeichnet **Phenomenology in Action in Psychotherapy** Ian Rory Owen, 2015-04-08 This book takes Edmund Husserl's phenomenology and applies it to help psychotherapy practitioners formulate complex psychological problems. The reader will learn about Husserl's system of understanding and its concepts that can point to first person lived experience and about the work of Husserl scholars who have developed a way to be precise about the experiences that clients have. Through exploring the connection between academic philosophy of consciousness and mental health themes of biopsychosocial treatment planning psychopathology of personality and psychological disorders and the treatment of complex psychological problems all emerge. The author shows that Husserlian phenomenology can be used in the design of interventions for each client in a process called formulation. Once the intentionality of consciousness of an individual is understood by asking simple questions it becomes possible to define problematic experiences. This is a means of creating informed consent for treatment and it also makes it clear to clients what is happening for them so helping them understand themselves and how they see the world. We also see how Husserl's phenomenology is a vehicle for psychotherapists to present their knowledge about the research literature of what has been found to be effective care. This volume applies the concepts and practices of phenomenology in a concrete way relating them to the practice of therapy and showing the value of a qualitative approach to understanding mental processes and the nature of human beings as motivated by values meanings and other conscious experiences. This is a readable text in simple language that condenses key aspects of Husserl's thinking in relation to the theory and practice of psychotherapy and it is suitable for philosophers and practitioners of psychology psychiatry and the psychotherapies including psychoanalysis.
