Dynamic Fleet Management Vasileios S. Zimpekis,Christos D. Tarantilis,George M. Giaglis,Ioannis E. Minis,2007-10-05 Dynamic Fleet Management will focus on real time management of a distribution system This means that when a dynamic event occurs within the distribution chain action must be taken in real time The book will integrate the latest results in system design algorithm development and system implementation to capture the state of the art research and application trends While much of the research in this area of transportation problems have almost exclusively concentrated on carrying out static plans on optional distribution conditions this book will examine those problems when some dynamic or unplanned even occurs within the transport or network system It will focus specifically on these cases and integrate the latest results in systems routing algorithms and case studies where information a dynamic event is revealed to the decision maker in a real time manner Proceedings of the 7th International Conference of Transportation Research Group of India (CTRG 2023).

Vehicular Communication Networks Khadige Abboud,Weihua Zhuang,2016-02-19 This brief presents a stochastic

microscopic mobility model that describes the temporal changes of intervehicle distances The model is consistent with simulated and empirical vehicle traffic patterns Using stochastic lumpability methods the proposed mobility model is mapped into an aggregated mobility model that describes the mobility of a group of vehicles In addition the proposed mobility model is used to analyze the spatiotemporal VANET topology Two metrics are proposed to characterize the impact of vehicle mobility on VANET topology the time period between successive changes in communication link state connection and disconnection and the time period between successive changes in node s one hop neighborhood Using the proposed lumped group mobility model the two VANET topology metrics are probabilistically characterized for different vehicular traffic flow conditions Furthermore the limiting behavior of a system of two hop vehicles and the overlap state of their coverage ranges is modeled and the steady state number of common vehicle neighbors between the two vehicles is approximately derived The proposed mobility model will facilitate mathematical analysis in VANETs The spatiotemporal VANET topology analysis provides a useful tool for the development of mobility aware vehicular network protocols Mobility Modeling for Vehicular Communication Networks is designed for researchers developers and professionals involved with vehicular communications It is also suitable for advanced level students interested in communications transport infrastructure and infotainment applications

Advanced Mobility and Transport Engineering Slim Hammadi,Mekki Ksouri,2013-03-04 Multimodal transport network customers need to be directed during their travels A travel support tool can be offered by a Multimodal Information System MIS which allows them to input their needs and provides them with the appropriate responses to improve their travel conditions The goal of this book is to design and develop methodologies in order to realize a MIS tool which can ensure permanent multimodal information availability before and during travel considering passengers mobility The authors propose methods and tools that help transport network customers to formulate their requests when they connect to their favorite information systems through PC laptop cell phone Portable Digital Assistant PDA etc The MIS must automatically identify the websites concerning the customer s services These sites can in fact represent transport services cultural services tourist services etc The system should then be able to collect the necessary travel information from these sites in order to construct and propose the most convenient information according to the user s requests *Green*
