Mutation Testing for the New Century W. Eric Wong, 2013-03-09

Extensive research and development has produced mutation tools for languages such as Fortran Ada C and IDL empirical evaluations comparing mutation with other test adequacy criteria empirical evidence and theoretical justification for the coupling effect and techniques for speeding up mutation testing using various types of high performance architectures Mutation has received the attention of software developers and testers in such diverse areas as network protocols and nuclear simulation Mutation Testing for the New Century brings together cutting edge research results in mutation testing from a wide range of researchers This book provides answers to key questions related to mutation and raises questions yet to be answered It is an excellent resource for researchers practitioners and students of software engineering

Handbook of Research on Modeling, Analysis, and Control of Complex Systems Azar, Ahmad Taher, Kamal, Nashwa Ahmad, 2020-12-05

The current literature on dynamic systems is quite comprehensive and system theory's mathematical jargon can remain quite complicated Thus there is a need for a compendium of accessible research that involves the broad range of fields that dynamic systems can cover including engineering life sciences and the environment and which can connect researchers in these fields The Handbook of Research on Modeling Analysis and Control of Complex Systems is a comprehensive reference book that describes the recent developments in a wide range of areas including the modeling analysis and control of dynamic systems as well as explores related applications The book acts as a forum for researchers seeking to understand the latest theory findings and software problem experiments Covering topics that include chaotic maps predictive modeling random bit generation and software bug prediction this book is ideal for professionals academicians researchers and students in the fields of electrical engineering computer science control engineering robotics power systems and biomedical engineering

Fourth European Symposium on Computer Aided Process Engineering, ESCAPE 4 F. A. Perris, 1994

This new edition is packed with updated examples and research samples making this the ideal resource for students involved in research in built environment subjects such as construction management construction project management facilities management real estate building surveying quantity surveying and civil engineering.

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation. The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret. As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in. Open access is now widely accepted as desirable and is slowly beginning to become a reality. However the second essential element evaluation has received less attention. Open evaluation an ongoing post-publication process of transparent peer review and rating of papers promises to address the problems of the current system. However it is unclear how exactly such a system should be designed. The evaluation system steers the attention of the scientific community and thus the very course of science. For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions. Evaluation therefore is at the heart of the entire endeavor of science. As the number of scientific publications explodes evaluation and selection will only gain importance. A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention. So far scientists have left the design of the evaluation process to journals and publishing companies. However the steering mechanism of science should be designed by scientists. The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the

network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system around these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point
