Exploring the World of Biology John Hudson Tiner, 2008-11-01 DISCOVER THE WORLD OF LIFE AS GOD CREATED IT. The field of biology focuses on living things from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds and mammals highlighting God's amazing creatio. You will learn about the following and so much more: How does biological classification give each different type of plant or animal a unique name? In what ways are seeds spread around the world? What food does the body use for long term storage of energy? How did biologists learn how the stomach digested food? What plant gave George de Mestral the idea for Velcro? For most of history biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar looking features into families. Starting in the 1990s biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design or creation. The Garden of God Pope Benedict XVI, 2014-03-17 Genesis, the first book of the Bible, tells of the creation of the world and our dominion over it. But is this the whole story? The planet on which we live is ecologically fragile, and all people of good will have a responsibility to take care of this most precious gift. During his papacy, Pope Benedict XVI repeatedly drew attention to the environment, whether in terms of preserving it, such as his address concerning Amazonia, and his letter regarding the Arctic, or distributing its vital resources, such as water, more equitably. What is more, during Benedict's papacy, the Vatican became the first and remains the only carbon-neutral country in the world. This book gathers together the audience's addresses, letters, and homilies of Benedict on a wide-ranging set of topics that deal with the world about us. The major themes and connections he explores are creation and the natural world, the environment, science and technology, and hunger, poverty, and the earth's resources. In these pages, Benedict insists that if we truly desire peace, we must be increasingly conscious of and nurture all of creation. Furthermore, he argues convincingly that as our love of God should cause us to protect the environment, so should our heightened sense of appreciation of the natural world draw us closer to God. Benedict speaks out against the spread of nuclear weapons, threats to biodiversity, and in favor of alternative energy. He urges sustainable development, equitable distribution of food and water, and an end to hunger. This book is a valuable resource for all those who seek to understand more fully the relationships among the environment, Catholic social teaching, and theology. Whether speaking to a vast crowd, meeting with a small group of scientists, or writing letters to world leaders, Benedict has shown a clear path towards a theologically cogent concern for the planet on which we live.
