The Forbes Crash Course In Investing:

The "Peak Oil" Scare and the Coming Oil Flood Michael C. Lynch, 2016-07-25 Is the earth's oil supply starting to run out or is there far more oil than some experts believe This book points out flaws in the research used to warn of an oil shortfall and predicts that large new reserves of oil are soon to be tapped In the last decade oil experts geologists and policy makers alike have warned that a peak in oil production around the world was about to be reached and that global economic distress would result when this occurred But it didn't happen The Peak Oil Scare and the Coming Oil Flood refutes the recent claims that world oil production is nearing a peak and threatening economic disaster by analyzing the methods used by the theory's proponents Author Michael C Lynch former researcher at Massachusetts Institute of Technology MIT debunks the Peak Oil crisis prediction and describes how the next few years will instead see large amounts of new supply that will bring oil prices down and boost the global economy This book will be invaluable to those involved in the energy industry including among those fields that are competing with oil as well as financial institutions for which the price of oil is of critical importance Lynch uncovers the facts behind the misleading news stories and media coverage on oil production as well as the analytic process that reveals the truth about the global oil supply General readers will be dismayed to learn how governments have frequently been led astray by seeming logical theories that prove to have no sound basis and will come away with a healthy sense of skepticism about popular economics

a fresh look at many famous financial crises around the globe analysing their causes and effects The special role of regulators is highlighted including the Capture Theory in practice This book is suitable for economist as well as for those interested in economic history and for all those concerned with the stability of current international financial markets Professor Dan Galai The Hebrew University Jerusalem Entrepreneurial Finance Miranda S. history of market society as a succession of distinct stages This vision of history rests on a chronological conception of time whereby each present slips into the past so that a future might take its place This book argues that the linear mode of thinking misses something crucial about the dynamics of contemporary capitalism Rather than each present leaving a set past behind it the past continually circulates through and shapes the present such that historical change emerges through a shifting panorama of historical associations names and dates The result is a strange feedback loop between now and then real and imaginary Demonstrating how this idea can give us a better purchase on financial capitalism in the post crisis era History in Financial Times traces the diverse modes of history production at work in the spheres of financial journalism policymaking and popular culture Paying particular attention to narrative and to notions of crisis recurrence and revelation Amin Samman gives us a novel take on the relation between historical thinking and critique
