Mental Health Research Institute, 1971 **Multi-verb constructions in Eastern Indonesia** Volker Unterladstetter , 2020 Constructions with multiple verbal elements have posed a long standing challenge to linguistic analysis Most studies of verb serialisation have been confined to single languages rather than looking at crosslinguistic patterns This book provides the first in depth account into the areal characteristics of multi verb

constructions MVCs in Eastern Indonesia By collating published data as well as corpus data from 32 Austronesian and Papuan languages the study traces commonalities as well as differences in MVC use across the area Analysis takes place on two levels first the morpho syntactic behaviour of MVCs is taken into account As this plane of analysis arguably does not provide any meaningful insights into why MVCs are construed and used the way they are a semantic account of MVCs is presented One of the main hypotheses advanced in this book is that the crucial driving force behind multi verb construals is semantic interaction between the verbs leading to four principal techniques of event formation merging staging modification and free juxtaposition The study aims at showing that while all four techniques are to varying degrees in use in Eastern Indonesian languages the morpho syntactic output does not necessarily mirror these underlying differences in event conception Applying insights from Davidsonian event semantics as well as from predicate decomposition the book provides a model of event interaction that helps to explain differences in MVC behaviour such as issues in constituent order or operator assignment
