Loaders L70B and L70C are provided with a six-cylinder, four-stroke, direct-injection, turbocharged, diesel engine type TD61GD or TD61KDE (low-emission engine).

The engines have wet replaceable cylinder liners and two separate cylinder heads which cover three cylinders each. The cylinder heads are interchangeable.

The lubrication is arranged through a pressure-lubrication system, where an oil pump supplies lubricating oil to all lubrication points.

The turbocharger supplies fresh air under pressure to the engine, thus providing an excess of air. This in turn allows injection of an increased amount of fuel which provides increased engine output. The turbocharger which is lubricated and cooled by the engine lubricating oil, is driven by the engine exhaust gases and thereby utilises otherwise unexploited energy.

Both engine versions approx be equipped with preheating of the induction air, (standard on low-emission version) [1] .

The preheating element (electrically), is positioned in the inlet manifold.

The engines also have a cold-starting device in the injection pump. It is automatically operated on the basic engine and manually operated on the low emission engine.
