Gluten free: Casein free Cookbook for Kids 100 Delicious Recipes Jennifer Bush, A gluten-free casein-free diet or GFCF diet eliminates dietary intake of the naturally occurring proteins gluten found most often in wheat

barley rye and commercially available oats and casein found most often in milk The implementation of a GFCF diet involves removing all sources of gluten and casein from a person's diet Gluten is found in all products containing wheat rye and barley Many gluten free breads pastas and snacks are available commercially What is a gluten free casein free diet for autism A gluten free casein free diet is also known as the GFCF diet It is one of several alternative treatments for children with autism When following this strict elimination diet all foods containing gluten and casein are removed from the child's daily food intake Some parents of children with autism believe their children are allergic or sensitive to the components found in these foods Some seek allergy testing for confirmation Yet even when no allergy is confirmed many parents of autistic children still choose to offer the GFCF diet Among the benefits they report are changes in speech and behavior How does a gluten free casein free diet for autism work The gluten free casein free diet is based on the theory that children with autism may have an allergy or high sensitivity to certain foods In particular the theory targets foods that contain gluten and casein Children with autism according to the theory process peptides and proteins in foods containing gluten and casein differently than other people do Hypothetically this difference in processing may exacerbate autistic symptoms Some believe that the brain treats these proteins like false opiate type chemicals The reaction to these chemicals they say leads a child to act in a certain way Based on this theory diets free of gluten and casein are given to children with autism The intent is to reduce symptoms and improve social and cognitive behaviors and speech There may be some scientific merit to the reasoning behind a gluten free casein free diet Researchers have found abnormal levels of peptides in bodily fluids of some people who have symptoms of autism Still the effectiveness of a GFCF diet for autism has not been scientifically substantiated in randomized clinical trials In fact a review of recent and past studies concluded there is a lack of scientific evidence to say whether this diet can be helpful or not Unfortunately eliminating all sources of gluten and casein is so hard that conducting randomized clinical trials in children may prove to be very difficult
