Weight loss is a great way to check degree of roast! Weigh your batch carefully on a gram scale before and after to determine percent of weight loss in roasting.

Notes:

Roast degree numbers refer to the SCA Specialty roast scale. Roast temperatures are approximate, and based on a roast system where First Crack starts at 405 f, and Second Crack starts at a range of 440 to 445 f.

Roasted coffee photos are wet-process Guatemala, 2-3 hours after roasting. The scale on the other side can be used for roasted whole bean, but comparing to ground coffee samples can be more effective. Grays are 18% Neutral.

and the Nile the cloud forests in southwestern Ethiopia are the original home of Arabica the most prevalent of the two main species of coffee being cultivated today Virtually unknown to European explorers the Kafa region was essentially off limits to foreigners well into the twentieth century which allowed the world's original coffee culture to develop in virtual isolation in the forests where the Kafa people continue to forage for wild coffee berries Deftly blending in the long fascinating history of our favorite drink award winning author Jeff Koehler takes readers from these forest beginnings along the spectacular journey of its spread around the globe With caf's on virtually every corner of every town in the world coffee has never been so popular nor tasted so good Yet diseases and climate change are battering production in Latin America where 85 percent of Arabica grows As the industry tries to safeguard the species future breeders are returning to the original coffee forests which are under threat and swiftly shrinking The forests around Kafa are not important just because they are the origin of a drink that means so much to so many writes Koehler They are important because deep in their shady understory lies a key to saving the faltering coffee industry They hold not just the past but also the future of coffee
