The design and construction of long and deep tunnels i e tunnels under mountains characterised by either considerable
length and or overburden represent a considerable challenge The scope of this book is not to instruct how to design and
construct such tunnels but to share a method to identify the potential hazards related to the process of designing and
constructing long and deep tunnels to produce a relevant comprehensive analysis and listing to quantify the probability and
consequences and to design proper mitigation measures and countermeasures The design developed using probabilistic
methods is verified during execution by means of the so called Plan for Advance of the Tunnel PAT method which allows
adapting the design and control parameters of the future stretches of the tunnel to the results of the stretches already
finished using the monitoring data base Numerous criteria are given to identify the key parameters necessary for the PAT
procedure Best practices of excavation management with the help of real time monitoring and control are also provided
Furthermore cost and time evaluation systems are analysed Finally contractual aspects related to construction by contract
are investigated for best development and application of models more appropriate for tunnelling construction contracts The
work will be of interest to practising engineers designers consultants and students in mining underground tunnelling
transportation and construction engineering as well as to foundation and geological engineers urban planners developers and
architects Perspectives on Computer Science Anita K. Jones,2014-06-17 *Perspectives on Computer Science* provides

in minicomputers Organized into 12 chapters this book begins with an overview of the technological economic and human
aspects of the environment in which PDP 11 was designed and built This text then examines the set of techniques for tree
searching Other chapters consider a tutorial on automatic planning systems with emphasis given to knowledge
representation issues This book discusses as well the classical least fixedpoint approach toward recursive programs and

examines the interplay between time and space determined by a variety of machine models The final chapter deals with some of the primary influences in contemporary programming language design namely programming methodology program specification verification and formal semantic definition techniques This book is a valuable resource for students and teachers Computer science theoreticians and mathematicians will also find this book useful *Technical Abstract Bulletin*, 1978 **Scientific and Technical Aerospace Reports**, 1976 **Indexes** United States.
