### Key Concept

Precipitation data for one month can be described as the total precipitation over the whole month.

Precipitation data for a month shows how much rain, snow, or other types of water fall from the sky during that time. To describe the precipitation for the whole month, we look at the total amount of precipitation. This means adding up all the rain or snow that fell on each day of the month. For example, if it rained 2 inches on one day and 3 inches on another day, the total precipitation for those two days would be 5 inches. This helps us understand how wet or dry a month was, which can tell us about the weather patterns for that time of

## WEATHER AND CLIMATE

### Key Concept

Scientists analyze evidence to find the strongest evidence. Stronger evidence makes an argument more convincing.

Scientists study evidence about weather to understand how it works and to predict future conditions. They collect data from things like temperature, precipitation, and wind and air pressure. By using technology, it is easier to collect data for a long time and in many places.

Scientists use the data to make predictions about the future. They use the data to make predictions about the future. They use the data to make predictions about the future. They use the data to make predictions about the future.
