Performance Analysis: GPTA-2

STUDENT's articulation skills were formally assessed using the (GETA₂). Assessment targets in the initial, medial and final positions of the word were elicited in single-word utterances and in sentences. To collect data in single-word utterances, **STUDENT** was presented with 48 colored pictures and was asked to name them spontaneously. During this task, **Teacher** exhibited **X** speech errors and obtained a standard score of **X**. To collect data at the sentence level, **STUDENT** participated in sentence repetition tasks. During sentence repetition tasks **Teacher** exhibited **X** speech errors and obtained a standard score of **X**.

Below is a table representative of the single word errors **STUDENT** exhibited during administration of the Sounds-in-Words subtest. The table also indicates the state's designated age at sound acquisition.

Error Type	Initial Position	Medial Position	Final Position	Designated Age at Acquisition (Years; Months)
Substitution				
Omission	Decrease Font Size

STUDENT's single word errors consisted of substitutions/omissions/distortions/additions. **Teacher**'s single word errors were compared to the state of Missouri's normative data for sound acquisition. The state of Missouri's normative data for sound acquisition suggests that the **X** phonemes are typically acquired by **X** years of age. **STUDENT**'s word production of these phonemes was not considered developmentally appropriate at **Teacher**'s chronological age level of **X** years, **X** months. The evaluating speech-language pathologist determined that **STUDENT**'s errors are not the result of dialectal differences or second language influence.
