Computational Linguistics Ruslan Mitkov, 2022-06-02 Ruslan Mitkov's highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition. Alongside updated accounts of the topics covered in the first edition, it includes 17 new chapters on subjects such as semantic role labelling, text-to-speech synthesis, translation technology, opinion mining and sentiment analysis, and the application of Natural Language Processing in educational and biomedical contexts among many others. The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics, the methods and resources used such as statistical modelling, machine learning and corpus annotation, key language processing tasks including text segmentation, anaphora resolution and speech recognition, and the major applications of Natural Language Processing from machine translation to author profiling. The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries.

Pervasive Computing Handbook Uwe Hansmann, Lothar Merk, Martin S. Nicklous, Thomas Stober, 2013-04-17 Our future is pervasive. We were not meant to be chained to our computers in our Dilbert cubicles. Having millions of white collar workers commute to work every day to sit for eight hours chained to their computer is something right out of a Kafka novel. Before the cell phone I can remember sitting at my desk waiting for calls to be returned. If I was traveling I made sure that I was all set up to place calls from public phone booths. Today I can't imagine having to look for a telephone booth. I can be reached on my tri-band digital cell phone anywhere in the world instantly. I also have a PDA that I carry everywhere. My PDA instantly synchronizes with my desktop computer which in turn connects to a larger network of computers and web portals. The world is my neighborhood. Soon digital devices will be working together hand in hand thanks to technologies such as Bluetooth. This includes devices such as cell phones, digital cameras, PDAs and desktop computers. The Wireless Internet is the catalyst for the convergence of digital communications, computing and rich media. This is a mega trend that we call Pervasive Computing. What Pervasive Computing means to each and every one of us is the ability to take our own worlds of personal and business information with us wherever we go. Now we can always be in touch with our families, affinity groups and co-workers.

Smart Card Programming Ugo Chirico, 2014-05-21 With Smart Card Programming the reader will have the expert guidance he needs to work with smart cards. The book offers a comprehensive guide to the technological aspects related to smart cards, providing a high level overview of the technological panorama and giving an in-depth technical coverage about the related architectures, programming paradigms and APIs. The first part of the book introduces the smart card technologies, the general concepts and a few case studies. It is addressed also to a non-technical reader who wishes a high level overview on the smart card world. The second part of the book is a technical guide to smart card specifications and programming paradigms. It dives into technical topics about smart card programming and applications development in C, C++, Visual Basic and Java. Key features include Contact and Contactless Cards, ISO 7816, NFC, JavaCard Framework, PC/SC, PKCS 11, OpenCard Framework, Java Smart Card I

Side Management for Flexible Operation of Sustainable Power Networks Jelena Ponoćko, 2020-01-27 This thesis deals with two important and very timely aspects of the future power system operation assessment of demand flexibility and advanced demand side management DSM facilitating flexible and secure operation of the power network It provides a clear and comprehensive literature review in these two areas and states precisely the original contributions of the research The book first demonstrates the benefits of data mining for a reliable assessment of demand flexibility and its composition even with very limited observability of the end users It then illustrates the importance of accurate load modelling for efficient application of DSM and considers different criteria in designing DSM programme to achieve several objectives of the network performance simultaneously Finally it demonstrates the importance of considering realistic assumptions when planning and estimating the success of DSM programs The findings presented here have both scientific and practical significance they gained her BSc and MSc degrees in electrical engineering from the University of Belgrade in 2011 and 2012 respectively She graduated with her PhD from the University of Manchester She has presented at several conferences and has won runner up prizes in poster presentation at three She has authored or co authored more than 40 journal conference and technical papers provide a basis for further research and can be used to guide future applications in industry

Resources in Education ,1995 **Planning, Housing and Infrastructure for Smart Villages** Hemanta Doloi, Ray Green, Sally Donovan, 2018-12-07 Some 7.3 billion people currently live on the planet Of these 3.4 billion live in rural areas In just a few regions Latin America the Middle East and North Africa less than 50 per cent of poverty is now located in rural

areas But for the rest of the world's regions between 55 per cent and 80 per cent of the poor continue to live in the countryside Progress is being made but much of the knowhow needed is not disseminated outside of a small coterie of professionals who work in the area With urban development attracting a great deal of attention lately poorer rural areas deserve the same and new knowledge for empowerment of rural communities is urgently needed This book provides an overview of current thinking and practices that have emerged over the last thirty years for uplifting rural communities in developing economies Drawing on a body of knowledge across a spectrum of relevant disciplines this book provides a range of innovative ideas for rural planning housing and infrastructure development Governments in many emerging economies where rural poverty is often most acute have attempted to improve livelihoods Approaches and techniques that have been used for urban development are often not applicable to rural communities Studies show that money allocated for rural development is often not effectively spent due to distance lack of infrastructure lack of education poverty and other factors Meanwhile the gap in development between the city and country continues to grow sometimes leading to social and political instability in both developing and developed countries This book seeks to provide a guidebook for meeting such challenges Through in depth enquiry of global practices and thinking about rural development and selected case studies the authors argue that careful consideration must be given to incorporating issues of resilience resourcefulness and the involvement of communities at grassroots levels in realising the transformation of rural settlements into Smart Villages
