Eysenck, Gisli H. Gudjonsson, 2013-03-09 The title that the authors have chosen for this book The Causes and Cures of Criminality suggests that it may be just another book speculating on the sociological evils that need to

be put right for everything in the garden to be lovely If this is the expectation the reader could not be more mistaken The recurrent theme in fact is a strong accent on psychological experiments Both authors have tackled the theoretical and practical side of crime through an exhaustive literature review of past experimental work Hans J Eysenck has concentrated on the constitutional and biological theory of criminality whereas Gisli Gudjonsson has concerned himself more with a review of ongoing research into therapy and possible prevention of antisocial behavior Part I goes into considerable detail on the causes of criminality stressing much of the strangely neglected area of individual differences in personality Research studies point to a very heavy involvement of heredity in the causation of criminality but the authors are careful to acknowledge that much can be done environmentally to discourage a life of crime once those persons who are at risk have been identified
