Homework: Ecological Succession

Use the diagram below and your notes to answer the following questions about succession.

1. *Biomass* is the amount of living material present in an environment. *Biodiversity* refers to the variety of living things that are present in an ecosystem. Which of the following would you expect to occur over time as ecological succession moves forward?

- A** increases in both biomass and biodiversity
- B** decreases in both biomass and biodiversity
- C** increases in biomass, but decreases in biodiversity
- D** decreases in biomass, but decreases in biodiversity

2. Which of the following animal niches will be filled first as an ecosystem begins the stages of ecological succession?

- A** carnivore
- B** scavenger
- C** herbivore
- D** apex predator

3. New ground begins as barren rock. This rock is covered in lichens and mosses, and eventually soil forms. Which two processes are most responsible for forming this soil at the beginning of ecological succession?

- A** Subduction and Deformation
- B** Transpiration and Precipitation
- C** Weathering and Decomposition
- D** Crystallization and Condensation

4. The diagram above shows how one community of organisms replaces another until which of the following is reached?

- A** pioneer community
- B** marine biome
- C** ecological pyramid
- D** climax community

5. Lava from a volcano cools and becomes new, barren land. If this land is completely *barren*, then it would contain –

- A** only abiotic factors
- B** only biotic factors
- C** both abiotic and biotic factors
- D** neither abiotic or biotic factors

6. The diversity of animals increases alongside plants because larger plant communities provide

- A** defense from attack by parasites
- B** more sunlight to warm the ecosystem
- C** more chemical energy in the food chain
- D** fewer places for prey animals to hide

Succession nothing in plant community or ecosystem ecology has been so elaborated by terminology so much reviewed and yet so much the center of controversy In a general sense every ecologist uses the concept in teaching and research but no two ecologists seem to have a unified concept of the details of succession The word was used by Thoreau to describe from a naturalist s point of view the general changes observed during the transition of an old field to a forest As data accumulated a lengthy taxonomy of succession developed around early twentieth century ecologists such as Cooper Clements and Gleason Now nearer the end of the century and after much discussion concerning the nature of vegetation communities where do ecologists stand with respect to knowledge of ecological succession The intent of this book is not to rehash classic philosophies of succession that have emerged through the past several decades of study but to provide a forum for ecologists to present their current research and present day interpretation of data To this end we brought together a group of scientists currently studying terrestrial plant succession who represent research experience in a broad spectrum of different ecosystem types The results of that meeting led to this book which presents to the reader a unique summary of contemporary research on forest succession
