Harrison, 2014-09-10 Among Mesoamericanists the agricultural basis of the ancient Maya civilization of the Yucatan Peninsula has been an important topic of research and controversy Interest in the agricultural system of the Maya greatly increased as new discoveries showed that the lowland Maya were not limited to slash and burn technology as had been previously believed but used a variety of more sophisticated agricultural techniques and practices including terracing raised fields and perhaps irrigation Because of the nature of the data and because this form of agricultural technology had been key to explanations of state formation elsewhere in Mesoamerica raised field agriculture became a particular focus of investigation Pulltrouser Swamp conclusively demonstrates the existence of hydraulic raised field agriculture in the Maya lowlands between 150 B C and A D 850 It presents the findings of the University of Oklahoma s Pulltrouser Swamp Project an NSF supported interdisciplinary study that combined the talents of archaeologists anthropologists geographers paleobotanists biologists and zoologists to investigate the remains of the Maya agricultural system in the swampy region of northern Belize By examining soils fossil pollen and other plant remains gastropods relic settlements ceramics lithics and other important evidence the Pulltrouser Swamp team has clearly demonstrated that the features under investigation are relics of Maya made raised and channelized fields and associated canals Other data suggest the nature of the swamps in which the fields were constructed the tools used for construction and cultivation the possible crops cultivated and at least one type of settlement near the fields with its chronology This verification of raised fields provides dramatic evidence of a large and probably organized workforce engaged in sophisticated and complex agricultural technology As record of this evidence Pulltrouser Swamp is a work of seminal importance for all students and scholars of New World prehistory **Quiriguá Reports, Volume III** Edward M. Settlement Archaeology at Quirigua, Guatemala Wendy Ashmore, 2013-01-09 This monograph reports the results of the Quirigu Project Site Periphery Program five seasons 1975-1979 of archaeological survey and excavation in the 96 km² immediately adjoining the classic Maya site of Quirigua. Ashmore identifies and helps us understand where and how the people of Quirigua lived. She presents detailed material evidence in two data catalogues for the floodplain settlement adjoining Quirigua and for sites in the wider periphery. The work situates Quirigua settlement firmly in a regional context benefiting from the extraordinary abundance of information amassed in southeastern Mesoamerica since 1979. It sheds new light on the political, economic and social dynamics of the region including the sometimes fractious interactions between Quirigua, its overlords at Copan and people elsewhere in the Lower Motagua Valley and beyond. Inmine Fire Tests of Mine Shaft Fire and Smoke Protection Systems Guy A. Johnson, David R. Forshey, 1978 **Nuclear Energy Safety and International Cooperation** Spencer Meredith, III, 2014-07-11 Twenty-five years after the Chernobyl explosion disaster struck once again after a tsunami overwhelmed the considerable safety measures at the Fukushima nuclear power plant in Japan. However, Fukushima had in place a solid containment structure to reduce the spread of radiation in the event of a worst-case scenario. Chernobyl did not. These two incidents highlight the importance of such safety measures which were critically lacking in an entire class of Soviet-designed reactors. This book examines why five countries operating these dangerous reactors first signed international agreements to close them within a few years then instead delayed for almost two decades. It looks at how political decision makers weighed the enormous short-term costs of closing those reactors against the long-term benefits of compliance and how the political instability that dominated post-Communist transitions impacted their choices. The book questions the efficacy of Western governments' efforts to convince their Eastern counterparts of the dangers they faced and establishes a causal relationship between political stability and compliance behavior. This model will also enable more effective assistance policies in similar situations of political change where decision makers face considerable short-term costs to gain greater future rewards. This book provides a valuable resource for postgraduate students, academics and policy makers in the fields of nuclear safety, international agreements and democratization.
