Submersible Vehicle Systems Design:

Submersible Vehicle Systems Design E. Eugene Allmendinger, 1990 **Pressure Vessels** Carl T. F. Ross, 2011-04-30

The choice of structural design and material is essential in preventing the external walls of a vessel from buckling under pressure. In this revised second edition of *Pressure vessels*, Carl Ross reviews the problem and uses both theoretical and practical examples to show how it can be solved for different structures. The second edition opens with an overview of the types of vessels under external pressure and materials used for construction. Axisymmetric deformation and different types of instability are discussed in the following chapters, with chapters 5 and 6 covering vibration of pressure vessel shells both in water and out. Chapters 7 and 8 focus on novel pressure hulls covering design vibration and collapse, while chapters 9 and 10 concentrate on the design and non linear analysis of submarine pressure hulls under external hydrostatic pressure. In chapter 11, the design structure and materials of deep diving underwater pressure vessels are discussed, focusing on their application in missile defence systems. Finally, chapter 12 analyses the vibration of a thin walled shell under external water pressure using ANSYS technology. Drawing on the author's extensive experience in engineering and design both in an industrial and academic capacity, the second edition of *Pressure vessels* is an essential reference for stress analysts, designers, consultants and manufacturers of pressure vessels, as well as all those with an academic research interest in the area. Presents an overview of the types of vessels under external pressure and materials used for construction. Assesses axisymmetric deformation and different types of instability covering vibration of pressure vessel shells. Explores novel pressure hulls covering design vibration and collapse, concentrating on the design and non linear analysis of submarine pressure hulls.

The 1973 oil crisis highlighted the dependency of the Community on imported hydrocarbons to satisfy its energy demand. Therefore, in order to improve security of supply, the Community has developed since 1973 a programme assisting the oil industry to develop new technologies required for exploiting oil and gas resources outside and inside the Community territories. This programme Regulations 3056/73 and 3639/85 has allowed remarkable achievements in a sector where innovation is needed to take up the challenge of producing oil and gas in difficult environments. This report shows the achievements of the Community programme. It gives evidence of the high technical level which has already been attained by the companies in the oil and
