Playing with Reality Kelly Clancy, 2024-06-18 NAMED A BEST BOOK OF THE YEAR BY THE ECONOMIST AND THE GUARDIAN Absorbing A revealing look at the hidden role that games have played in human development for centuries Kirkus By turns philosophical and polemical this is a provocative and fascinating book The Economist A wide ranging intellectual history that reveals how important games have been to human progress and what is at stake when we forget what games we are really playing We play games to learn about the world to understand our minds and the minds of others and to make predictions about the future Games are an essential aspect of humanity and a powerful tool for modeling reality They are also a lot of fun But games can be dangerous especially when we mistake the model worlds of games for reality itself and let gamification co-opt human decision making Playing with Reality explores the riveting history of games since the Enlightenment weaving an unexpected path through military theory political science evolutionary biology the development of computers and AI cutting edge neuroscience and cognitive psychology Neuroscientist and physicist Kelly Clancy shows how intertwined games have been with the arc of history War games shaped the outcomes of real wars in nineteenth and twentieth century Europe Game theory warped our understanding of human behavior and brought us to the brink of annihilation yet still underlies basic assumptions in economics politics and technology design We used games to teach computers how to learn for themselves and now we are designing games that will determine the shape of society and future of democracy In this revelatory work Clancy makes the bold argument that the human fascination with games is the key to understanding our nature and our actions

The Shifts and the Shocks Martin Wolf, 2014-09-04 In *The Shifts and the Shocks* Martin Wolf one of the world's most influential economic commentators and author of *Why Globalization Works* presents his controversial and highly original analysis of the economic course of the last seven years There have been many books that have sought to explain the causes and courses of the financial and economic crisis which began in 2007 8 *The Shifts and the Shocks* is not another detailed history of the crisis but the most persuasive and complete account yet published of what the crisis should teach us about

modern economies and economics The book identifies the origin of the crisis in the complex interaction between globalization hugely destabilizing global imbalances and our dangerously fragile financial system In the eurozone these sources of instability were multiplied by the tragically defective architecture of the monetary union It also shows how much of the orthodoxy that shaped monetary and financial policy before the crisis occurred was complacent and wrong In doing so it mercilessly reveals the failures of the financial political and intellectual elites who ran the system The book also examines what has been done to reform the financial and monetary systems since the worst of the crisis passed Are we now on a sustainable course Wolf asks The answer is no He explains with great clarity why further crises seem certain and why the management of the eurozone in particular guarantees a huge political crisis at some point in the future Wolf provides far more ambitious and comprehensive plans for reform than any currently being implemented Written with all the intellectual command and trenchant judgement that have made Martin Wolf one of the world's most influential economic commentators *The Shifts and the Shocks* matches impressive analysis with no holds barred criticism and persuasive prescription for a more stable future It is a book no one with an interest in global affairs will want to neglect MARTIN WOLF is Associate Editor and Chief Economics Commentator at the Financial Times London He is the recipient of many awards for financial journalism for which he was also made a CBE in 2000 His previous books include *Why Globalization Works* and *Fixing Global Finance* We have been inundated with books about the financial aspects of the crisis There have also been many books about specific institutions or memoirs by retired policy makers We need something different There are two dimensions of the crisis that have received surprisingly little treatment One is the link between developments in the macro economy and the behaviour of the financial sector The other is the global dimension of the crisis Both these lie at the heart of Martin Wolf's analysis of the causes of the crisis and of his proposals to reduce the risk of another crisis For these two reasons this is an important book that will be influential Most important of all it is in my view the right analysis and remedy Mervyn King To think straight about the causes and solutions of the financial crisis we must reject orthodox assumptions that more finance and global financial integration are limitlessly beneficial *The Shifts and the Shocks* does just that providing an intellectually sparkling and vital account of why the crisis occurred and of the radical reforms needed if we are to avoid a future repeat Adair Turner Martin Wolf is unsurpassed in the world of economic journalists His superb book may be the best of all those spawned by the Great Recession It is analytical and rigorous without ever succumbing to fatalism or complacency Lawrence Summers

Advances in Credit Risk Modeling and Management Frédéric Vrans,2020-07-01 Credit risk remains one of the major risks faced by most financial and credit institutions It is deeply connected to the real economy due to the systemic nature of some banks but also because well managed lending facilities are key for wealth creation and technological innovation This book is a collection of innovative papers in the field of credit risk management Besides the probability of default PD the major driver of credit risk is the loss given default LGD In spite of its central importance LGD modeling remains largely unexplored in the academic literature This book proposes three contributions in the field Ye Bellotti exploit a large private dataset featuring non performing loans to design a beta mixture model Their model can be used to improve recovery rate forecasts and therefore to enhance capital requirement mechanisms Francois uses instead the price of defaultable instruments to infer the determinants of market implied recovery rates and finds that macroeconomic and long term issuer specific factors are the main determinants of market implied LGDs Cheng Cirillo address the problem of modeling the dependency between PD and LGD using an original urn based statistical model Fadina Schmidt propose an improvement of intensity based default models by accounting for ambiguity around both the intensity process and the recovery rate Another topic deserving more attention is trade credit which consists of the supplier providing credit facilities to his customers Whereas this is likely to stimulate exchanges in general it also magnifies credit risk This is a difficult problem that remains largely unexplored Kanapickiene Spicas propose a simple but yet practical model to assess trade credit risk associated with SMEs and microenterprises operating in Lithuania Another topical area in credit risk is counterparty risk and all other adjustments such as liquidity and capital adjustments known as XVA Chataignier Crpey propose a genetic algorithm to compress CVA and to obtain affordable incremental figures Anagnostou Kandhai introduce a hidden Markov model to simulate exchange rate scenarios for counterparty risk Eventually Boursicot et al analyzes CoCo bonds and find that they reduce the total cost of debt which is positive for shareholders In a nutshell all the featured papers contribute to shedding light on various aspects of credit risk management that have so far largely remained unexplored

World Development Report 2015 World Bank,2014-12-04 Development economics and policy are due for a redesign In the past few decades research from across the natural and social sciences has provided stunning insight into the way people think and make decisions Whereas the first generation of development policy was based on the assumption that humans make decisions deliberatively and independently and on the basis of consistent and self interested preferences recent research shows that decision making rarely proceeds this way People think automatically when deciding they usually draw on what comes to mind effortlessly People also think socially social norms guide much of behavior and many people prefer to cooperate as long as others are doing their share And people think with mental models what they perceive and how they interpret it depend on concepts and worldviews drawn from their societies and from shared histories The World Development Report 2015 offers a concrete look at how these insights apply to development policy It shows how a richer view of human behavior can help achieve development goals in many areas including early childhood development household finance productivity health and climate change It also shows how a more subtle view of human behavior provides new tools for interventions Making even minor adjustments to a decision making context designing interventions based on an understanding of social preferences and exposing individuals to new experiences and ways of thinking may enable people to improve their lives The Report opens exciting new avenues for development work It shows that poverty is not simply a state of material deprivation but also a tax on cognitive resources that affects the quality of decision making It emphasizes that all humans including experts and policy makers are subject to psychological and social influences on thinking and that development organizations could benefit from procedures to improve their own deliberations and decision making It demonstrates the need for more discovery learning and adaptation in policy design and implementation The new approach to development economics has immense promise Its scope of application is vast This Report introduces an important new agenda for the development community
