Reasoning Web Norbert Eisinger, Jan Maluszynski, 2005-08-25 This volume contains the tutorial papers of the Summer School Reasoning Web July 25-29 2005 <http://reasoningweb.org> The School was hosted by the University of Malta and was organized by the Network of Excellence REWERSE Reasoning on the Web with Rules and Semantics <http://rewerse.net> funded by the EU Commission and by the Swiss Federal Office for Education and Science within the 6th Framework Programme under the project reference number 506779 The objective of the school was to provide an introduction into methods and issues of the Semantic Web a major endeavor in current Web research where the World Wide Web Consortium W3C plays an important role The main idea of the Semantic Web is to enrich Web data with meta data carrying a meaning of the data and allowing Web based systems to reason about data and meta data The meta data used in Semantic Web applications is usually linked to a conceptualization of the application domain shared by different applications Such a conceptualization is called an ontology and specifies classes of objects and relations between them Ontologies are defined by ontology languages based on logic and supporting formal reasoning Just as the current Web is inherently heterogeneous in data formats and data semantics the Semantic Web will be inherently heterogeneous in its reasoning forms Indeed any single form of reasoning turns out to be insufficient in the Semantic Web

Model driven approach for the automated analysis of Unified Modeling Language class diagrams Kyriakos Anastasakis, 2009

Empirical Assessment of UML Class Diagram Layouts Based on Architectural Importance

Bonita Sharif,2010 The dissertation presents a suite of empirical studies that investigate the effectiveness of different layout techniques for Unified Modeling Language UML class diagrams Three different layout schemes are examined The architectural importance of classes is used to guide each layout technique Architectural importance in a UML class diagram is defined by stereotype information in this case the control boundary and entity class stereotypes Stereotypes are an extension mechanism provided by the UML that allow users to define semantics for the notation The premise is that layout techniques for UML class diagrams significantly impact comprehension The experiments use traditional questionnaire based methods as well as eye tracking equipment to quantitatively measure the performance of subjects solving specific software maintenance tasks Both high level and low level software engineering tasks are examined The layout techniques are also applied to design pattern comprehension in class diagrams Two of the experiments are replicated using an alternate method of data collection to support and verify the findings In addition the effect of identifier styles camel case and underscore on the readability of UML class diagrams are also examined and is viewed as complementary to layout schemes used The main contribution is a detailed empirical validation of a set of layout techniques with respect to a variety of software maintenance tasks Results indicate that layout plays a significant role in the comprehension of UML class diagrams In particular there is a significant improvement in accuracy time and visual effort for one particular layout scheme namely multi cluster In addition a set of quantifiable eye tracking measures are presented that provide an objective metric to measure the visual effort for class diagram layouts The ultimate purpose of the research is to determine effective ways to adjust the layout of existing UML class diagrams to support program comprehension Based on the empirical evidence a set of guidelines for layout adjustment is presented

A Model Driven Approach for the Automated Analysis of UML Class Diagrams Kyriakos Anastasakis,2009
Generating Formal Models from UML Class Diagrams Malcolm Shroff,1997 *Rendering UML Class Diagrams to Support Layout Design* Paul Joseph Leyden,2019 This thesis investigates and implements mechanisms to render and layout software design models that are reverse engineered from software systems The software design models are represented as Unified Modeling Language UML class diagrams UML diagrams are widely used by software developers to document the design of software systems The work presented here extends a software system srcUML that takes source code as input and generates a graphical picture of the UML class diagram The system is built on top of the srcML infrastructure This infrastructure parses the source code and provides access to the abstract syntax for the analysis necessary to generate the UML class diagram The main contribution of the work presented is extending the system to support various layout algorithms for the class diagrams The extension allows users to provide their own customized layout algorithms to the system This directly supports research in software comprehension by allowing comparison between different layout algorithms No current UML rendering tools allow different custom layout algorithms to be used The system is open source and available at www.srcML.org **UML Tutorials - Herong's Tutorial Examples** Herong Yang,2014-01-01 This book is a collection of

tutorial notes and sample codes written by the author while he was learning UML Unified Modeling Language himself Main tutorials include Introduction to UML UML Class Diagrams UML Activity Diagrams UML Sequence Diagrams UML State Machine Diagrams UML Use Case Diagrams Using LibreOffice and MS Visio to Draw UML Diagram Updated in 2024 Version v1 05 with minor changes For latest updates and free sample chapters visit [https://www.herongyang.com/UML-Elements-of-UML\(TM\)-Style](https://www.herongyang.com/UML-Elements-of-UML(TM)-Style) Scott W. Ambler,2003 Contains standards and guidelines for creating UML diagrams that are concise and easy to understand

Assessing the Comprehension of UML Class Diagrams Via Eye Tracking Shehnaaz Yusuf Patel Dawoodi,2007 In this thesis eye tracking equipment is used to assess how well a subject comprehends UML class diagrams The goal of the study is to identify specific characteristics of UML class diagram such as layout color and stereotype usage that are most effective for supporting a given task Prior investigations in the software visualization and program comprehension communities have primarily focused on effective layout schemes and key aesthetics criteria with the goal of enhancing the cognitive process A number of usability studies have been reported that evaluate UML class diagrams including those with additional semantic information e g class stereotypes for an effective representation in addressing various software evolution tasks These studies typically form conjectures and or draw conclusions from the data explicitly collected from subjects via a combination of questionnaires experience reports and feedback comments after a designated task is completed This raises a potential threat to the validity of the study namely How well the subjects responses on completion of a task match the reality they observed while performing that task That is a subject may forget to report or misreport an observation after a lengthy task for example Here we take a different approach to assess UML class diagrams Results indicate subjects have a variation in the eye movements i e how the subjects navigate the diagram depending on their UML expertise and software design ability to solve the given task Layouts with additional semantic information about the design were found to be most effective and the use of class stereotypes seems to play a substantial role in comprehension of these diagrams
