Morbidity and Mortality Weekly Report ,2009-05 **Professional Services in the EU Internal Market** Tinne

Heremans,2012-01-31 Professional services are a key component of the EU internal market economy yet also significantly challenge the legal framework governing this internal market Indeed specific professional regulatory structures which are often the result of a blend of government and self regulation hold clear potential for conflict with EU free movement and competition law rules Hence this book looks at the manner in which both free movement and competition laws might apply to such self and co regulatory set ups and at the leeway given to quality considerations apparently conflicting with free movement or competition objectives In addition since court action will seldom suffice to genuinely integrate a market the book also explores those instruments of EU secondary legislation that are likely to impact the most on the provision of professional services However the book goes beyond a mere inventory to ask how EU Internal Market policy could contribute to the optimal legal environment for professional services A law and economics analysis is employed to investigate the need for specific professional rules the preferred type of regulator self co or government regulation and the level national and or European at which regulation should be adopted As becomes clear the story of the market for professional services is one of market and government failure the author is thus left to compare imperfect situations where market failures compete with rent seeking efforts the tendency towards over centralisation and national protectionism This book offers both an in depth legal analysis of the EU framework as it applies to professional services as well as a more normative evaluation of this framework based on insights from law and economics scholarship It will therefore be a valuable resource for all practitioners policy makers and academics dealing with professional services as well as more generally with questions of quality and self

regulation A History of Intelligence and 'Intellectual Disability' C F Goodey,2013-07-28 Starting with the hypothesis that not only human intelligence but also its antithesis intellectual disability are nothing more than historical contingencies C F Goodey s paradigm shifting study traces the rich interplay between labelled human types and the radically changing characteristics attributed to them From the twelfth century beginnings of European social administration to the onset of formal human science disciplines in the modern era A History of Intelligence and Intellectual Disability reconstructs the socio political and religious contexts of intellectual ability and disability and demonstrates how these concepts became part of psychology medicine and biology Goodey examines a wide array of classical late medieval and Renaissance texts from popular guides on conduct and behavior to medical treatises and from religious and philosophical works to poetry and drama Focusing especially on the period between the Protestant Reformation and 1700 Goodey challenges the accepted wisdom that would have us believe that intelligence and disability describe natural trans historical realities Instead Goodey argues for a model that views intellectual disability and indeed the intellectually disabled person as recent cultural creations His book is destined to become a standard resource for scholars interested in the history of psychology and medicine the social origins of human self representation and current ethical debates about the genetics of intelligence **The Daily**

Global Rankings and the Geopolitics of Higher Education Ellen Hazelkorn,2016-11-18 Global rankings and the

Geopolitics of Higher Education is an examination of the impact and influence that university rankings have had on higher education policy and public opinion in recent years. Bringing together some of the most informed authorities on this very complex issue, this edited collection of specially commissioned chapters examines the changes affecting higher education and the implications for society and the economy. Split into four interrelated sections, this book covers: The development of rankings in higher education; how they have impacted upon both the production of knowledge and its geography and their influence in shaping policymaking; Overviews of the significance of rankings for higher education systems in Europe, Asia, Africa, Russia, South America, India, and North America; An analysis of rankings in relation to key concerns that pervade contemporary higher education; Examination of the role rankings are likely to play in the future directions for higher education. This is a significant scholarly work that analyses in depth an important development in higher education systems and which is likely to have an important influence upon how we understand the higher education policy making process, past, present, and future. It provides new analysis and conceptual understanding for researchers and firm evidence for policy makers to use when addressing the value of rankings in measuring the quality of their institutions. Besides bringing together a powerful cast of academics, this book incorporates contributions from heads of important international higher education organisations from both those involved in making and also in administering key decisions. This timely, reflective, and accessible book forms crucial reading for those studying the subject of rankings, as well as the broader implications and unintended consequences of rankings on national higher education policies. Extending beyond academic researchers and students, this book will also be of significant interest to policymakers, higher education leaders, and key stakeholders.
