Fuels and Vegetation Management Project ,2008 **Future Drivers of Growth in Rwanda** The World Bank,Government of Rwanda,2020-07-06 A strong and widely acknowledged record of economic success including a three and a half fold increase

in per capita income since 1994 places Rwanda among the world's fastest growing economies. Traumatic memories of the 1994 genocide are gradually fading as associations begin to take a more positive form of a nation on the rise powered by human resilience, a sense of common purpose and a purposeful government. Past successes and a sense of frailty have fueled aspirations for a secure, prosperous and modern future. Sustaining high rates of economic growth is at the heart of these ambitions. Recent formulations of the nation's Vision 2050 set a target of achieving upper middle income status by 2035 and high income status by 2050. Future Drivers of Growth in Rwanda: Innovation, Integration, Agglomeration and Competition, a joint undertaking by experts from Rwanda and the World Bank Group, evaluates the country's possibilities and options in this endeavor. The report identifies four essential drivers of growth: innovation, integration, agglomeration and competition, and reforms in six priority areas: human capital development, export dynamism and regional integration, well managed urbanization, competitive domestic enterprises, agricultural modernization and capable and accountable public institutions.

A Small Quarterly Multi-Country Projection Model with Financial-Real Linkages and Oil Prices Mr. Ondrej Kamenik, Ioan Carabenciov, Igor Ermolaev, Charles Freedman, Dmitry Korshunov, Jared Laxton, Mr. Douglas Laxton, Michel Juillard, 2008-12-01. This is the third of a series of papers that are being written as part of a larger project to estimate a small quarterly Global Projection Model (GPM). The GPM project is designed to improve the toolkit for studying both own country and cross country linkages. In this paper, we estimate a small quarterly projection model of the US, Euro Area and Japanese economies that incorporates oil prices and allows us to trace out the effects of shocks to oil prices. The model is estimated with Bayesian techniques. We show how the model can be used to construct efficient baseline forecasts that incorporate judgment imposed on the near term outlook.

2020 Global Stocktaking of National Accounts Statistics: Availability for Policy and Surveillance Anthony Silungwe, Mr. Andrew Baer, Vanda Guerreiro, 2022-02-11. This paper analyzes the availability, methodological soundness and scope of National Accounts statistics in IMF member and non member countries in 2020. National Account statistics are instrumental in the development of fiscal and monetary policy and in monitoring economic developments. This analysis examines the appropriateness of the current set of global national accounts statistics for current policy development and highlights regions where further development may be required. The assessment is based on the results of a national accounts survey conducted by Fund staff that examined the scope of national accounts programs in IMF member countries. The survey was completed by statistical authorities between March 2021 and July 2021. The information reflects the state of National Accounts Programs as of the end 2020. In cases of non response, IMF staff used information taken from the IMF's Dissemination Standards Bulletin Board (DSBB) and country websites to provide the status of national accounts compilation practices. This analysis summarizes the following key indicators: time lag of national accounts benchmarks, availability of annual and quarterly GDP estimates, vintage of the System of National Accounts (SNA) index formula used for calculating annual constant price volume estimates, availability of GDP by different approaches, timeliness of disseminating and annual and

quarterly GDP estimates availability institutional sector accounts and access to source data
