Learning Styles and other Secrets of Learning John Terrey,2014-02-14 **Such Silver Currents** Monty Chisholm,2021-01-01 This is the first biography of a mathematical genius and his literary wife their wide circle of well known intellectual and artistic friends and through them of the age in which they lived William Clifford died in 1879 at the age of 33 During his short life he became renowned not only for his innovative and lasting mathematics but also for his philosophy which embraced the fundamentals of scientific thought the nature of the physical universe Darwinian evolutionary theory the nature of consciousness personal morality and law and the whole mystery of being It is now recognised among mathematicians and physicists that Dirac s theory of the electron

fundamental to modern physics is based on Clifford algebra He also anticipated Einstein's idea that space is curved The year after his election to the Royal Society Clifford married Lucy Lane the journalist and novelist During their four years of marriage they held Sunday salons which were attended by many well known scientific literary and artistic personalities After William's death Lucy became a close friend and confidante of Henry James Her wide circle of friends included Rudyard Kipling Thomas Hardy George Eliot Leslie Stephen Thomas Huxley Sir Frederick Macmillan Oliver Wendell Holmes Jr Monty Chisholm has researched the lives of these two influential people from archive material biographies of those who knew them and hitherto unpublished collections of letters Her insight not only into the lives of the Cliffords but also into the period in which they lived makes for fascinating and lively reading The book is further enhanced by a personal reflection on William Clifford's mathematics in the Afterword by the celebrated mathematician Sir Roger Penrose O M

Exploring the Infinite

Jennifer Brooks, 2016-11-30 Exploring the Infinite addresses the trend toward a combined transition course and introduction to analysis course It guides the reader through the processes of abstraction and logical argumentation to make the transition from student of mathematics to practitioner of mathematics This requires more than knowledge of the definitions of mathematical structures elementary logic and standard proof techniques The student focused on only these will develop little more than the ability to identify a number of proof templates and to apply them in predictable ways to standard problems This book aims to do something more it aims to help readers learn to explore mathematical situations to make conjectures and only then to apply methods of proof Practitioners of mathematics must do all of these things The chapters of this text are divided into two parts Part I serves as an introduction to proof and abstract mathematics and aims to prepare the reader for advanced course work in all areas of mathematics It thus includes all the standard material from a transition to proof course Part II constitutes an introduction to the basic concepts of analysis including limits of sequences of real numbers and of functions infinite series the structure of the real line and continuous functions Features Two part text for the combined transition and analysis course New approach focuses on exploration and creative thought Emphasizes the limit and sequences Introduces programming skills to explore concepts in analysis Emphasis in on developing mathematical thought Exploration problems expand more traditional exercise sets
