Mathematical Circle Diaries, Year 2 Anna Burago, 2018-07-03. Mathematical circles with their question-driven approach and emphasis on problem solving expose students to the type of mathematics that stimulates the development of logical thinking, creativity, analytical abilities and mathematical reasoning. These skills, while scarcely introduced at school, are in high demand in the modern world. This book, a sequel to *Mathematical Circle Diaries Year 1*, teaches how to think and solve problems in mathematics. The material distributed among twenty-nine weekly lessons includes detailed lectures and discussions, sets of problems with solutions and contests and games. In addition, the book shares some of the know-how of running a mathematical circle. The book covers a broad range of problem-solving strategies and proofing techniques as well as some more advanced topics that go beyond the limits of a school curriculum. The topics include invariants, proofs by contradiction, the Pigeonhole principle, proofs by coloring, double counting, combinatorics, binary numbers, graph theory, divisibility and remainders, logic and many others. When students take science and computing classes in high school and college, they will be better prepared for both the foundations and advanced material. The book contains everything that is needed to run a successful mathematical circle for a full year. This book, written by an author actively involved in teaching mathematical circles for fifteen years, is intended for teachers, math coaches, parents and math enthusiasts who are interested in teaching math that promotes critical thinking. Motivated students can work through this book on their own. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers and the mathematics profession.
