Solution Manager 7.1 SP 5 Troubleshooting guide for System monitoring, E2E Diagnostics, JSM Health check and performance issues

5 5 12,753

While implementing System monitoring for ABAP systems, E2E Diagnostics for Enterprise Portal and JSM health check for ABAP systems, we faced many unexpected issues. Some issues were only in Production environment and not in Quality/Development environment of SolMan. I have tried to document those issues and the solutions we used. Hope this will help the SolMan consultants who are facing these issues in their implementation. We were on SolMan 7.1 SP 5.

1 Functionality: System monitoring

1.1 Issue: Alerts not generated

This job is the main calculation job for all metrics, events and alerts. If this job is not running properly, no alerts will ever be generated.

If the engine job is not scheduled, you can execute the step in

Basic Configuration -> Step 5 Configure Automatically -> Create Alert Calculation Job.

Screen shots:

5 minutes after executing this step the first metrics should be green.

2) The DPC push web service and EFWK resource manager

Without this service, no metrics can be pushed from the managed system to the solution manager, resulting in grey metrics and no alerts.

Cognitively Diagnostic Assessment Paul D. Nichols, Susan F. Chipman, Robert L. Brennan, 2012-12-06 During the past two or three decades research in cognitive science and psychology has yielded an improved understanding of the fundamental psychological nature of knowledge and cognitive skills that psychological testing attempts to measure These theories have reached sufficient maturity making it reasonable to look upon them to provide a sound theoretical foundation for assessment particularly for the content of assessments This fact combined with much discontentedness over current

testing practices has inspired efforts to bring testing and cognitive theory together to create a new theoretical framework for psychological testing a framework developed for diagnosing learners differences rather than for ranking learners based on their differences This volume presents some initial accomplishments in the effort to bring testing and cognitive theory together Contributors originate from both of the relevant research communities cognitive research and psychometric theory Some represent collaborations between representatives of the two communities others are efforts to reach out in the direction of the other community Taking fundamentally different forms psychometric test theory assumes that knowledge can be represented in terms of one or at most a few dimensions whereas modern cognitive theory typically represents knowledge in networks either networks of conceptual relationships or the transition networks of production systems Cognitively diagnostic assessment is a new enterprise and it is evident that many challenging problems remain to be addressed Still it is already possible to develop highly productive interactions between assessment and instruction in both automated tutoring systems and more conventional classrooms The editors hope that the chapters presented here show how the reform of assessment can take a rigorous path
