A Toxic Substance Model for a Well-Mixed Lake

To this point, we have dealt with what are often termed conventional pollutants, e.g. nitrogen, phosphorus, organic carbon, etc. Now our attention will move to toxic substances, substances which differ from conventional pollutants in several ways important to the modeler:

- natural versus alien: problems relating to conventional pollutants typically involve the natural cycle of organic production and decomposition, most often over stimulation of natural processes. Toxic substances do not occur naturally and the problem is one of interference with natural processes.
- aesthetics versus health: a case could be made that mitigation of problems relating to conventional pollutants largely seeks to eliminate aesthetic problems. Although such a case would be overstated, it is clear that management of toxic substances focuses on health concerns, e.g. drinking water and aquatic food stuffs.
- few versus many: conventional water quality management deals with on the order of ten 'pollutants'. In contrast, there are tens of thousands of organic chemicals that may be introduced to the environment.
- single versus multiple phase: conventional pollutants are largely modeled as single species, although some partitioning is made between the dissolved and particulate phases. Such partitioning is critical for modeling toxic substances, because they tend to exist in gaseous, dissolved and particulate phases.

It is the liquid/solid partitioning which most significantly impacts the manner in which toxic substances are modeled. A mechanistic treatment of partitioning is important because key source/sink processes act selectively on either the dissolved or particulate form. For example, volatilization acts solely on the dissolved form, settling only on the particulate form, and decay reactions on both.

Mathematically, the total contaminant concentration ($\text{mg}\cdot\text{m}^{-3}$) is given by,

$$C = C_d + C_p$$

where c_d is the dissolved component and c_p is the particulate component, each representing a fixed fraction of the total concentration,

$$c_d = F_d \cdot C$$

Environmental Fate and Transport Analysis with Compartment Modeling Keith W. Little,2012-06-25 Environmental Fate and Transport Analysis with Compartment Modeling explains how to use the powerful highly flexible and intuitive compartment approach to estimate the distribution of chemical contaminants in environmental media in time and space Add this Easy to Use Approach to Your Environmental Modeling Toolbox This numerical technique enables readers to easily develop the equations that describe complex environmental problems by assembling the equations out of compartmental building blocks The compartments may describe spatial subunits of single or multi environmental media and the way one hooks them together implicitly provides the dimensionality of the problem With this approach assembling the equations to describe chemical fate and transport in a three dimensional multimedia system is fundamentally no more challenging than a one dimensional single medium problem Go Beyond Black Box Modeling with the Flexible GEM Software The book includes access to the Generic Environmental Model GEM a new software package developed by the author This software implements the compartment approach based on user prepared input files and solves the resulting mathematical equations It allows readers to solve linear nonlinear and steady state problems and offers four methods for solving dynamic problems Each

solution technique is reviewed along with the error properties and the criteria for avoiding or minimizing numerical errors
The book also describes solution techniques and the underlying mathematical theory for solving nonlinear systems
Compartment Modeling from the Ground Up Made Accessible to Non Mathematicians A user friendly introduction to
environmental compartment modeling for the beginning modeler this is also a useful resource for the experienced modeler It
combines a reference on compartment modeling with a user s guide to the GEM Throughout the GEM is used to illustrate the
theory with numerous examples while the theoretical discussions illuminate the GEM s functionality
