Mathematics Manual for Water and Wastewater Treatment Plant

Operators: Wastewater Treatment Operations Frank R. Spellman, 2023-07-31 To properly operate a waterworks or wastewater treatment plant and to pass the examination for a waterworks wastewater operator's license it is necessary to know how to perform certain calculations. All operators at all levels of licensure need a basic understanding of arithmetic and problem solving techniques to solve the problems they typically encounter in the workplace. Hailed on its first publication as a masterly account written in an engaging highly readable user friendly style, the fully updated Mathematics Manual for Water and Wastewater Treatment Plant Operators: Wastewater Treatment Operations covers all the necessary computations used in wastewater treatment today. It presents math operations that progressively advance to higher more practical applications including math operations that operators at the highest level of licensure would be expected to know and perform. Features: Provides a strong foundation based on theoretical math concepts which it then applies to solving practical problems for both water and wastewater operations. Updated throughout and with several new practical problems added. Provides illustrative examples for commonly used waterworks and wastewater treatment operations covering unit process operations found in today's treatment facilities.

MATLAB Applications in Chemical Engineering

Chyi-Tsong Chen, 2022-05-20 This book addresses the applications of MATLAB and Simulink in the solution of chemical engineering problems. By classifying the problems into seven different categories, the author organizes this book as follows: Chapter One: Solution of a System of Linear Equations; Chapter Two: Solution of Nonlinear Equations; Chapter Three: Interpolation, Differentiation and Integration; Chapter Four: Numerical Solution of Ordinary Differential Equations; Chapter Five: Numerical solution of Partial Differential Equations; Chapter Six: Process Optimization; Chapter Seven: Parameter Estimation. Each chapter is arranged in four major parts. In the first part, the basic problem patterns that can be solved with MATLAB are presented. The second part describes how to apply MATLAB commands to solve the formulated problems in the field of chemical engineering. In the third and the fourth parts, exercises and summary of MATLAB instructions are provided respectively. The description of the chemical engineering example follows the sequence of problem formulation, model analysis, MATLAB program design, execution results and discussion. In this way, learners are first aware of the basic problem patterns and the underlying chemical engineering principles, followed by further familiarizing themselves with the relevant MATLAB instructions and programming skills. Readers are encouraged to do exercises to practice their problem solving skills and deepen the fundamental knowledge of chemical engineering and relevant application problems.
