How to Save the World from Ourselves Saygin Celen, Existential Threat Climate change is the biggest existential crisis that humankind has faced In the last 100 years we have ruined the carbon cycle using fossil fuels namely coal petroleum and natural gas to build our civilization not taking into account the catastrophic impacts of climate change can cause We are already seeing a record of floods hurricanes wildfires and droughts since the temperature rise is already at 1.5 degrees Celsius We need to reduce our greenhouse effect by half by 2030 and reach the zero carbon economy by 2050 to limit the temperature rise to 2 degrees Celsius Even though our lives depend on it most of us don't know about the causes and how we will be able to tackle this existential threat This book gives you alternative answers on what steps governments companies and individuals need to take Greenhouse Effects and Global Warming According to Elon Musk Ruining the carbon cycle is the dumbest experiment in history Life on earth built its balance in 4.5 billion years and human induced fossil fuel emissions caused the carbon dioxide density to increase from 300 to 420 ppm in less than 100 years resulting in the heat to be trapped in the atmosphere and the average temperature to increase 1.5 degrees Celsius We need to keep it at 2 degrees Celsius level The Biggest Opportunity We are at a turning point Climate change solutions also make

economical sense which is what governments and corporations are completely aware Now is the time to phase out the fossil fuel production and consumption and gain full momentum to the green zero carbon economy such as geothermal wind power solar electricity nuclear fusion and biomass Fortunately renewable sources along with the available technologies and upcoming innovations are all in line to create the sustainable future economy Successful Models Arguably the biggest challenge that the humanity has ever overcome as one species is the Ozone depletion through the Montreal Protocol which was signed by 197 countries Now the Ozone layer is fully recovering as chlorofluorocarbons are banned by all countries and it s estimated to fully recover by 2050 The Montreal Treaty and other successful technologies and innovations can be used as a success model that also represents what we are able to achieve when we unite The New Economy It s inevitable that we will be feeling the impacts of climate change for the decades to come since we keep filling the atmosphere with greenhouse gases However we have every reason to be extremely hopeful since all the countries signed the Paris Agreement they come together each year to improve the progress via COP meetings and we have new and upcoming technologies such as Tokamak nuclear fusion solid state batteries complete electrification of vehicles and concentrated solar power that can realize the zero carbon economy by the 2050 deadline Learn what climate change exactly is and how we will be able to tackle it in the next few decades This book will bring you the information and insight for you to see how governments companies and individuals can take orchestrated actions
