Tie strengths in social networks are heterogeneous, with strong and weak ties playing different roles at the network and individual levels. Egocentric networks, networks of relationships around an individual, exhibit few strong ties and more weaker ties, as evidenced by electronic communication records. Mobile phone data has also revealed persistent individual differences within this pattern. However, the generality and driving mechanisms of social tie strength heterogeneity remain unclear. Here, we study tie strengths in egocentric networks across multiple datasets of interactions between millions of people during months to years. We find universality in tie strength distributions and their individual-level variation across communication modes, even in channels not reflecting offline social relationships. Via a simple model of egocentric network evolution, we show that the observed universality arises from the competition between cumulative advantage and random choice, two tie reinforcement mechanisms whose balance determines the diversity of tie strengths. Our results provide insight into the driving mechanisms of tie strength heterogeneity in social networks and have implications for the understanding of social network structure and individual behavior.

Social networks are key to the exchange of ideas, norms, and other cultural constructs in human society¹, influencing the way we communicate², support each other^{3,4}, and form enduring communities⁵. Decades of research have focused on regularities in the patterns of relations among individuals⁶ as well as the drivers and mechanisms behind their origin⁷. One particularly prominent feature of social networks is the diversity of tie strengths⁸, where strong ties are typically embedded within social groups while weak ties are crucial for the cohesiveness of the network as a whole^{9–11}. At the micro level, ego networks—the sets of social ties between an individual (the ego) and their family, friends, and acquaintances (the alters)—commonly feature a small core of close relationships. These close relationships are associated with high emotional intensity and they are surrounded by a larger number of weaker ties. The emergence of this characteristic structural pattern has been associated with

constraints on maintaining social relationships, which include limited information processing capacity¹², social cognition^{13–15}, and time availability^{16–17}.

Studies of human communication via mobile phones have shown that in line with the above picture, there is a consistent, general pattern in egocentric networks where a small number of close alters receive a disproportionately large share of communication. Data on the frequency of mobile phone calls and text messages also indicate that within this general pattern, there are clear and persistent individual differences^{18–22}: some people repeatedly focus most of their attention on a few close relationships, while others tend to distribute communication among their alters more evenly²³. These differences are stable in time even under high personal network turnover. However, the mechanisms that generate such heterogeneity of tie strengths, its individual-level variation, and the generality of this pattern beyond

Beginning with the role of culture as a crucial element in marketing communication, the book delves into various matters within the scope of marketing communication. Consequently, social media and its significance in modern marketing strategies are examined together with the topic of transition from offline to online marketing, emphasizing the impact of accelerated digitalization and its onset during the third decade of the twenty-first century. Furthermore, the book discusses the rapid digital transformation stimulated by the COVID-19 pandemic and thus creates room for further exploration and research. Throughout the book, the evolving dynamics of marketing communication in a digitalized world are examined, providing a resource base for scholars conducting research in the context of modern marketing management.

The Influence of Technology on Social Network Analysis and Mining Tansel Özyer, Jon Rokne, Gerhard Wagner, Arno H.P. Reuser, 2013-03-15 The study of social networks was originated in social and business communities. In recent years, social network research has advanced significantly, the development of sophisticated techniques for Social Network Analysis and Mining (SNAM) has been highly influenced by the online social Web sites, email logs, phone logs, and instant messaging systems, which are widely analyzed using graph theory and machine learning techniques. People perceive the Web increasingly as a social medium that fosters interaction among people, sharing of experiences and knowledge, group activities, community formation, and evolution. This has led to a rising prominence of SNAM in academia, politics, homeland security, and business. This follows the pattern of known entities of our society that have evolved into networks in which actors are increasingly dependent on their structural embedding. General areas of interest to the book include information science and mathematics, communication studies, business and organizational studies, sociology, psychology, anthropology, applied linguistics, biology, and medicine.

Instructional Communication Competence and Instructor Social Presence: Enhancing Teaching and Learning in the Online Environment

Sherwyn Morreale, Patrick R. Lowenthal, Janice Thorpe, Larisa Olesova, 2024-05-16 The coronavirus pandemic mandated unexpected instant transitions to remote learning and accelerated student demand for online courses. As a result, colleges and universities in the U.S. and around the world began and have continued to expand their online courses and degree programs. The online learning industry is projected to pass 370 billion by 2026, and one third of post-secondary school administrators indicate they will continue to offer both remote and online course options even after their campuses completely resume offering in-person face-to-face courses. Students have demonstrated there is an increased demand for online courses as well. A national survey of 1,413 students registered at U.S. higher education institutions in fall 2020 and spring 2021 said their experiences with learning remotely during the pandemic left them with a positive attitude toward online and hybrid courses. This increased interest calls attention to the need for more scholarly examination of online teaching and learning.

Researching and Understanding Educational Networks Robert McCormick, Alison Fox, Patrick Carmichael, Richard Procter, 2010-06-25 In the twenty first century what could be more important than networks Such is the power of their influence and attendant technologies that it is unsurprising that our thinking about networks is permeated with images and metaphors from electronic networks This orientation may equally influence thinking about education whether that is of students or teachers Researching and Understanding Educational Networks extends the discussion of educational networks in a unique and novel way by relating it to teacher learning Following an investigation of teacher and school networks in the UK the authors found that theoretical perspectives taken from existing work on such networks were not adequate to provide an understanding of their potential nor to provide the basis for researching them in ways that reflected the variety of teacher experience This book presents analyses of the problems with existing theories of teacher learning which for example draw on ideas of communities of practice and explores what network theories can be brought to the problem of how teachers and schools create and share new knowledge about practice Innovative networking theories discussed include social network analysis social capital theories actor network theory investigations of electronic networks including computer mediated conferencing how people learn at events such as conferences Researching and Understanding Educational Networks explores a new application of networks theories derived from quite different fields of work and extends it both by being concerned about networks beyond organisations and specifically about educational networks Their application to educational networks and to teacher learning in particular is a unique contribution of the book This enables it to be of interest to both researchers and those studying for higher degrees including students who are professionals working in schools
