Vautrin,2013-06-29 The main advantages of sandwiches as structural components are now well known and well established Due to the progress in polymer science and engineering and advances in manufacturing processes sandwich structures can blend various functional and structural properties and therefore lead to highly innovating systems The current difficulty to overcome is to provide designers with proper methodologies and tools that could enable them to design improved sandwich structures Such dedicated design tools should be efficient reliable flexible

and user friendly They should be based on advanced knowledge of sandwich behaviour at global and local scales Such approach relies on our capability to test identify control and model structure performances The impressive variety of core and face materials and the rapid developments in forming processes give new opportunities to design components which have more complex shapes and higher integrated functional and structural properties Interest in sandwiches is permanently growing in industry and refined testing and modelling approaches should be encouraged to set up relevant guidelines to design reliable advanced structures The European Society for Mechanics sponsored the EUROMECH 360 Colloquium on the Mechanics of Sandwich Structures in Saint Etienne France on 13 15 May 1997 The main purpose of EUROMECH 360 was to go into the most recent progresses in sandwich analysis and design including mechanical modelling and testing It was expected that the Colloquium should contribute to define new research directions to support development of advanced applications in strategic industrial sectors such as ground transportations or building and civil engineering

Iraq and the United States Anthony H. Cordesman, Adam Mausner, Elena Derby, 2010 If Iraq and the United States are to win the war in any meaningful and lasting sense they must translate the Strategic Agreement they signed in November 2008 into a lasting and functional strategic partnership In the process the United States must put Iraq firmly in the lead but sustain the kind of aid and advice that will help Iraq make further progress in political accommodation the quality of governance economic development and security The CSIS Burke Chair in Strategy conducted a detailed analysis of the current situation in Iraq the challenges Iraq faces and the actions the United States needs to take to help Iraq meet those challenges Its report provides a detailed risk assessment of current and potential levels of violence in Iraq It addresses the levels of political accommodation and stability and the problems Iraq still faces in the aftermath of the national election It also addresses the opportunities and problems in developing Iraq's petroleum sector investment and development issues in other sectors the problems in the Iraqi budget forecasts and progress in Iraqi reconstruction It evaluates the need for continued economic aid and advice and describes U S options for extending such assistance The concluding section examines progress in creating Iraqi military and police forces It examines the role the United States can play in helping Iraq further develop such forces and analyzes what a strategic partnership based on the Strategic Agreement should mean

Cross-Reactive Immunity and COVID-19 Alberto Beretta, Ahmed Yaqinuddin, Aristo Vojdani, Pedro A. Reche, 2025-01-06 There is a growing evidence that

cross reactive immunity from common human coronaviruses hCoVs can shape the immunological response to SARS CoV 2. Cross reactive T cells appear to play a protective role against disease but there is no consensus on the role of cross reactive antibodies with some authors reporting protective effects mechanisms and other authors reporting evidence of negative interference due to the generation of low affinity antibodies in the context of an original antigenic sin. Reports of association of pre existing immunity to hCoVs and milder clinical manifestations of COVID 19 conflict with other reports showing in COVID 19 patients a strong boost of antibodies to hCoVs with very little if no neutralizing activity against SARS CoV 2. However SARS CoV 2 hCoVs cross reactive antibodies more specifically those directed against the S2 subunit of the Spike protein may be protective via Fc mediated mechanisms that recruits NK cells ADCC or similar mechanisms. Since these antibodies do not neutralize or neutralize very poorly SARS CoV 2 in vitro they have been only occasionally investigated and rarely considered in the search for correlates of protection. Alternatively it should also be considered that protection against severe COVID 19 disease may be sustained by cross reactive T cells with cross reactive antibodies being only a proxy of protective T cell immunity. Although pre existing immunity to SARS CoV 2 is more often linked hCoVs other sources of cross reactive immunity to SARS CoV 2 including bacteria and vaccine antigens are also plausible and should be considered. In particular it has been identified first computationally and later experimentally cross reactive immunity to SARS CoV 2 from combination tetanus diphtheria vaccines DTaP DTwP TD and Tdap. Moreover epidemiological studies have clearly shown that subjects vaccinated with tetanus diphtheria vaccines are less likely to suffer severe COVID 19. Cross reactive immunity to SARS CoV 2 from pediatric tetanus Diphtheria vaccines and seasonal exposures to hCoVs likely play an important role in protecting children from COVID 19. On the other hand the elderly may fail to mount an effective primary response to SARS CoV 2 following infection owing to the loss of cross reactive memory B and T cells and their relative inability to recruit naive T and B cells.
