Debasis Kundu, Swagata Nandi, 2012-05-24 Signal processing may broadly be considered to involve the recovery of information from physical observations. The received signal is usually disturbed by thermal, electrical, atmospheric, or intentional interferences. Due to the random nature of the signal, statistical techniques play an important role in analyzing the signal. Statistics is also used in the formulation of the appropriate models to describe the behavior of the system, the development of appropriate techniques for estimation of model parameters, and the assessment of the model performances. Statistical signal processing basically refers to the analysis of random signals using appropriate statistical techniques. The main aim of this book is to introduce different signal processing models which have been used in analyzing periodic data and different statistical and computational issues involved in solving them. We discuss in detail the sinusoidal frequency model which has been used extensively in analyzing periodic data occurring in various fields. We have tried to introduce different associated models and higher dimensional statistical signal processing models which have been further discussed in the literature. Different real data sets have been analyzed to illustrate how different models can be used in practice. Several open problems have been indicated for future research. *Signals and Systems Using MATLAB* Luis F. Chaparro, Aydin

Akan, 2018-10-29 *Signals and Systems Using MATLAB* Third Edition features a pedagogically rich and accessible approach to what can commonly be a mathematically dry subject. Historical notes and common mistakes combined with applications in controls, communications, and signal processing help students understand and appreciate the usefulness of the techniques described in the text. This new edition features more end-of-chapter problems, new content on two-dimensional signal processing, and discussions on the state of the art in signal processing. Introduces both continuous and discrete systems early, then studies each separately in depth. Contains an extensive set of worked examples and homework assignments with applications for controls, communications, and signal processing. Begins with a review on all the background math necessary to study the subject. Includes MATLAB applications in every chapter. *Learning Approaches in Signal Processing* Wan-Chi

Siu, Lap-Pui Chau, Liang Wang, Tieniu Tang, 2018-12-07 Coupled with machine learning, the use of signal processing techniques for big data analysis, Internet of things, smart cities, security, and bioinformatics applications has witnessed explosive growth. This has been made possible via fast algorithms on data, speech, image, and video processing with advanced GPU technology. This book presents an up-to-date tutorial and overview on learning technologies such as random forests, sparsity, and low-rank matrix estimation, and cutting-edge visual signal processing techniques including face recognition, Kalman filtering, and multirate DSP. It discusses the applications that make use of deep learning, convolutional neural networks, random forests, etc. The applications include super-resolution imaging, fringe projection profilometry, human activities detection, capture gesture recognition, spoken language processing, cooperative networks, bioinformatics, DNA, and healthcare. **Communications, Computation, Control, and Signal Processing** Arogyaswami Paulraj, Vwani

Roychowdhury, Charles D. Schaper, 2012-12-06 A Paulraj V Roychowdhury and C Schaper Dept of Electrical Engineering

Stanford University Dept of Electrical Engineering UCLA Innumerable conferences are held around the world on the subjects of communications computation control and signal processing and on their numerous subdisciplines Therefore one might not envision a coherent conference encompassing all these areas However such an event did take place June 22-26 1995 at an international symposium held at Stanford University to celebrate Professor Thomas Kailath's sixtieth birthday and to honor the notable contributions made by him and his students and associates The depth of these contributions was evident from the participation of so many leading figures in each of these fields Over the five days of the meeting there were about 200 attendees from eighteen countries more than twenty government and industrial organizations and various engineering mathematics and statistics faculties at nearly 50 different academic institutions They came not only to celebrate but also to learn and to ponder the threads and the connections that Professor Kailath has discovered and woven among so many apparently disparate areas The organizers received many comments about the richness of the occasion A distinguished academic wrote of the conference being the single most rewarding professional event of my life The program is summarized in Table 1.1 a letter of reflections by Dr C Rohrs appears a little later

Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic, Tiago H. Falk, 2018-07-04 Within the healthcare domain big data is defined as any high volume high diversity biological clinical environmental and lifestyle information collected from single individuals to large cohorts in relation to their health and wellness status at one or several time points Such data is crucial because within it lies vast amounts of invaluable information that could potentially change a patient's life opening doors to alternate therapies drugs and diagnostic tools *Signal Processing and Machine Learning for Biomedical Big Data* thus discusses modalities the numerous ways in which this data is captured via sensors and various sample rates and dimensionalities Capturing analyzing storing and visualizing such massive data has required new shifts in signal processing paradigms and new ways of combining signal processing with machine learning tools This book covers several of these aspects in two ways firstly through theoretical signal processing chapters where tools aimed at big data be it biomedical or otherwise are described and secondly through application driven chapters focusing on existing applications of signal processing and machine learning for big biomedical data This text aimed at the curious researcher working in the field as well as undergraduate and graduate students eager to learn how signal processing can help with big data analysis It is the hope of Drs Sejdic and Falk that this book will bring together signal processing and machine learning researchers to unlock existing bottlenecks within the healthcare field thereby improving patient quality of life Provides an overview of recent state of the art signal processing and machine learning algorithms for biomedical big data including applications in the neuroimaging cardiac retinal genomic sleep patient outcome prediction critical care and rehabilitation domains Provides contributed chapters from world leaders in the fields of big data and signal processing covering topics such as data quality data compression statistical and graph signal processing techniques and deep learning and their applications within the biomedical sphere This book's material covers how

Recent Advances in Multimedia Signal Processing and Communications Mislav Grgic, Kresimir Delac, Mohammed Ghanbari, 2009-09-30 The rapid increase in computing power and communication speed coupled with computer storage facilities availability has led to a new age of multimedia applications. Multimedia is practically everywhere and all around us; we can feel its presence in almost all applications ranging from online video databases, IPTV, interactive multimedia, and more recently in multimedia-based social interaction. These new growing applications require high quality data storage, easy access to multimedia content, and reliable delivery. Moving ever closer to commercial deployment also aroused a higher awareness of security and intellectual property management issues. All the aforementioned requirements resulted in higher demands on various areas of research: signal processing, image/video processing and analysis, communication protocols, content search, watermarking, etc. This book covers the most prominent research issues in multimedia and is divided into four main sections: i) content-based retrieval, ii) storage and remote access, iii) watermarking and copyright protection, and iv) multimedia applications. Chapter 1 of the first section presents an analysis on how color is used and why it is crucial in nowadays multimedia applications. In chapter 2, the authors give an overview of the advances in video abstraction for fast content browsing, transmission, retrieval, and skimming in large video databases, and chapter 3 extends the discussion on video summarization even further. Content retrieval problem is tackled in chapter 4 by describing a novel method for producing meaningful segments suitable for MPEG-7 description based on binary partition trees (BPTs).
