

width of the disabled lift truck. Center the weight of the disabled lift truck on the forks and be careful not to damage the under side of the lift truck.

HOW TO TOW THE LIFT TRUCK

1. The towed lift truck must have an operator.
2. Tow the lift truck slowly.
3. Raise the carriage and forks approximately 30 cm (12 inches) from the surface. Install a chain to prevent the carriage and mast channels from moving.
4. If another lift truck is used to tow the disabled lift truck, that lift truck must have an equal or larger capacity than the disabled lift truck. Install an approximate half-capacity load on the forks of the lift truck that is being used to tow the disabled lift truck. This half capacity load will increase the traction of the lift truck. Keep the load as low as possible.
5. Make sure the tow chain has the capacity to tow the weight. Make sure the chain is fastened so that the chain will not cause damage to either lift truck.

HOW TO PUT A LIFT TRUCK ON BLOCKS

WARNING: The lift truck must be put on blocks for some types of maintenance and

repair. The removal of the following assemblies will cause large changes in the center of gravity: mast, drive axle, battery, and the counterweight.

When the lift truck is put on blocks, put additional blocks in the following positions to maintain stability:

1. Before removing the mast and drive axle, put blocks under the counterweight so that the lift truck cannot tip backward.
2. Before removing the battery or counterweight, put blocks under the mast assembly so that the lift truck cannot tip forward.

Put the lift truck on blocks only if the surface is solid, even, and level. Make sure that any blocks used to support the lift truck are solid, one piece units.

NOTE: Some lift trucks have lifting eyes. These lift points can be used to raise the lift truck so that blocks can be installed.

HOW TO RAISE THE DRIVE TIRE (SEE FIGURE 6.)

1. Put blocks on each side (front and back) of the steer tires to prevent movement of the lift truck.
2. Put the mast in a vertical position. Put a block under each outer mast channel.
