children their families teachers and schools This report looks at children s school performance during first grade in terms of their reading and mathematical knowledge and skills by relating them to child family and school characteristics The report finds that some of the differences in children s reading and mathematics knowledge and skills by child family and school characteristics that are present as they enter kindergarten persist into the spring of their kindergarten and spring of their first grade year For example poor children consistently score below the national average in both reading and mathematics across the kindergarten year and into the spring of first grade These findings also suggest differences that are beginning to emerge by children s sex By spring of first grade females are more likely to be reading understanding words in context whereas males are more likely to be proficient at advanced mathematics multiplication and division However some differences do seem to wane For example in both reading and mathematics Hispanic children s scores tend to move upward toward the national mean over these two school years The longitudinal nature of the ECLS K will enable researchers to track these differences in terms of children s third and fifth grade reading and mathematics performance The report also notes that children who bring certain knowledge and skills with them to kindergarten are likely to be at an advantage in classroom learning compared to peers who do not possess such resources The descriptive analyses of the report show that children who have specific cognitive knowledge and skills are read to frequently possess positive approaches to learning and enjoy very good or excellent general health perform better in reading and mathematics than those without these resources Includes data and standard error tables Appended is a table of regression coefficients for the relationship between children s resources and skills to their spring kindergarten and spring first grade reading performance Contains 18 references HTH
